Mayors Address 1892.

GENTLEMEN OF THE COUNCIL :

Standing on the threshold of another municipal year, we have assembled in obedience to the voice of our fellow-citizens to pledge ourselves to a faithful and conscientious discharge of the sacred trust confided to us.

The charter separates the executive functions, which I again assume, from the legislative, which devolves upon you, still, it is my agreeable duty to invite your attention to the consideration of certain matters which, in my opinion are of vital importance to our beloved city, will increase its prosperity and growth, and add to the comfort and happiness of its citizens.

I also deem it wise to lay before you a brief outline of the past year's work, while the reports which accompany this message will give you in detail an account of the stewardship of the city's servants.

One of the most important obligations resting upon us is the proper care of the finances of the city, and it should be our constant aim to insure to the citizens for every dollar collected from them in taxation a full and equitable return in benefits.

Believing that each official should act upon the principle of expending only such amounts as the Council appropriate for his use, and realizing that this business method could not be carried out, if bills inherited from previous years were to be charged against the new appropriations, I requested the Council to provide for such bills. This request having been complied with, the current expenses of 1891 have been properly charged and the financial year closed with ample means on hand to meet any legitimate demand likely to be made.

By the provisions of chapter 312 of the Acts and Resolves of 1885 the appropriations for all other purposes than the State tax, county tax and sums required by law to be raised on

account of the city debt, cannot exceed a sum equal to a rate of \$12 per 1000 of the average valuation for the three preceding years.

The law limits the amount that can be raised by taxation for current expenses, but the rate is determined by the valuation of the property upon which it is assessed.

NET VALUATION FOR THREE YEARS.

	Total Valuation.	Abatement.	Net Valuation.
1889,	\$12,319,245	\$137,770	\$12,181,475
1890,	13,677,410	127,114	13,550,296
1891,	14,427,030	166,691	14,260,339
Total, - - - - -			\$39,992,110

Average valuation for the past three years, \$13,330,703 : assessed at \$12 per 1000 gives \$159,968.43, which is the legal limit for municipal purposes for 1892 outside of the requirements previously spoken of.

The problem before us is to so distribute this moderate sum as to reasonably and equitably provide for the running expenses of both departments.

In view of the expenses of the School Board, which necessarily require so large a proportion of the tax levy, we are unable to carry forward any specific improvements on our streets, sidewalks and drains, or to erect new buildings, without pledging the credit of the city. A large interest account and a higher tax rate result in consequence.

As many of these improvements are of absolute necessity for the city's welfare, the citizens will be content if the money is wisely expended, but we must carefully decide between what is a luxury and what is a necessity, in thus using the credit of the city. I believe in progress, but that does not warrant extravagance, and we must carefully study each question as it presents itself, and weighing it in its bearings upon all other questions.

CITY DEBT, JANUARY 1, 1892.

	Totals.	Falling due this year.	
Willard special, . . .	\$3,000 00	\$1,000 00	Jan. 1
Deficiency, . . .	6,655 07	6,655 07	Apr. 1

Water street,	33,532 36		
	<hr/>	<hr/>	
	\$262,386 89	\$56,619 53	

A total of \$262,386.89, of which amount \$56,619.53 is due this year. \$246,000 of the debt is of the nature of permanent improvements.

The borrowing capacity of the city is as follows: Average valuation for three years, \$13,330,703; two and one-half per cent., \$333,267; debt, \$262,386.89; leaving a margin of \$70,880.11 January 1, 1892.

COMMISSIONER OF PUBLIC WORK DEPARTMENT.

Our highways begin to show marked improvement, still there is a decided call for further work in the direction of permanent construction. The annual appropriation for care of highways is so small that only ordinary repairs can be made, and any rebuilding is out of the question except by a specific loan for that purpose.

The city has in the past three years expended \$100,000 in permanent street construction, and care must be taken to keep these newly constructed streets in a satisfactory condition, which is a difficult matter to do, when we consider that we have 75 miles of streets and practically about \$12,000 per year to expend on them.

In my opinion, it is folly to use gravel on our streets, for it is soon ground to dust by our heavy teams. The use of more crushed stone is far more economical in the end, and I regret that the Council of 1891 did not provide this department with a new crusher, so that 150 tons of rock could be crushed every day and stored, thus preventing delays when work is to be done for want of material. It would save the city a large amount expended in hand labor.

One of the most serious difficulties in the care of our streets is the disposal of the surface water. Many of our streets have been laid out without any regard to a proper grade for surface drainage. The city has drained some of them on to private lands; but as these lands are being taken up for dwellings, a system of surface drainage must soon be devised. Quincy is fortunate in having so many brooks in her midst into which the surface water from off our streets can be carried, and I would again recommend the Council to consider this important question of surface drainage, and if one can be devised, we can petition the Legislature for a special act.

The principal work done during the past year was the rebuilding of Washington street; rebuilding a portion of Adams street, and completing Reardon street. A large amount of work has been performed on Hancock street, and a balance of the appropriation remains to still further improve this street the present year.

A large catch-basin and drain has been constructed on Garfield street, also on Common street, which will properly remedy long standing nuisances in these streets.

A catch-basin and drain has also been constructed on Washington street.

Two large stone culverts have been constructed on Woodbine and Greenwood avenues.

Seven thousand one hundred and six feet of paved gutters have been laid.

Two thousand three hundred and fifty-one feet of edgestones have been laid, where the abutters paid one-half the expense.

Five thousand four hundred and seventeen feet of edgestones have been laid in all. Thirty crossings have been located in the different wards.

Coddington street is one of the main arteries of travel, and the daily traffic is on the increase through that section. It is only thirty-three feet in width, and in view of its widening in the near future, I would recommend that the city negotiate with the trustees of the City Hospital for a portion of their land, which will be needed for said widening, and it should be purchased before any proposed buildings are erected upon the land.

Copeland and Granite streets will have to be paved before they will be in a satisfactory condition, but I cannot recommend any definite plan until after the completion of Water street.

The watering of our main thoroughfares is, in my judgment, most essential through the summer months, not only because it is necessary to protect the road-bed, but it is also necessary for the comfort and health of the citizens. The Legislature has passed an act providing for the way that it can be done under certain provisions, to which I would call your attention.

SIDEWALKS.

No better investment for a city can be made than by the construction of permanent sidewalks therein. They not only add to the comfort of the citizens, and to the beauty of the city, but form a strong inducement to strangers to become residents in the cities where they exist. Formerly sidewalks seem to have been considered in the nature of a luxury. Abutters were permitted to build them in towns at their own expense, if they could do so without unreasonably obstructing the highway. In cities which have adopted certain statute provisions the city council may grade and construct sidewalks, cover them with appropriate materials, and may assess not exceeding one-half the expense proportionally upon the abutters.

The City Council of Quincy has, during the past year, taken advantage of these provisions and I trust that during the present year you will inaugurate a movement looking to the building of permanent sidewalks under the general law.

I would suggest the adoption of an ordinance specifying the materials of which the sidewalks are to be constructed, also their width, so that not only durability, but uniformity and beauty of construction may be attained.

As the building of such sidewalks under the "Betterment Act" would first be on our main thoroughfares, there should also be an appropriation for the same purpose to be expended in residential sections, where the abutters petition for the same, and are willing to pay one-half of the expense.

I also would recommend, in order for the city to do its share towards inspiring the citizens to aid this desired improvement, that permanent sidewalks of brick be constructed around our schoolhouses and all public buildings.

LIGHTING.

Our streets are lighted by 89 arc, 105 incandescent, 68 gas and 127 oil lamps. The annual appropriation is necessarily large to provide for this number of lights, and nearly equals the appropriation for repairs on streets.

I consider light to be a necessity in these days. It insures safe travelling on our streets, prevents many accidents, and is a great help to our police force.

I am still of the opinion expressed to the Council one year ago that this body can render the city great service by studying the problem of lighting its streets, for I believe that a city should perform its own work in this direction.

BUILDINGS.

The Commissioner has had the charge of all the repairs on schoolhouses the past year, but I would recommend that in the present year the appropriation for that purpose be expended by the School Board.

The City Hall is badly adapted for the transaction of public business, and, by order of the Council, plans have been procured for remodelling the same, which would, if carried out, provide suitable and satisfactory accommodations.

WILLARD SCHOOL.

Owing to the failure of the contractors, it became necessary for the city to take possession of the building, and the same was completed in season for the school term in September last. The cost of the building to date has been \$98,640, and the city has made a demand upon the bondsmen for the failure of the contractors to complete their work. The system of heating is not yet working satisfactorily, but it is hoped that the trouble can soon be remedied.

The School Board will call your attention to the pressing need of more school accommodation in Ward Three, and I hope this question will receive your attention early in the year, that work on any proposed building may be commenced in the Spring, in order that it can be completed for the fall term.

Neponset bridge has been replanked its entire length. The work on the Point, Hingham and Weymouth bridges has been done jointly by this city and the above-named towns.

The County Commissioners have still under consideration the petition of the city to compel the Old Colony railroad to widen their bridge over Hancock street and rebuild the approaches thereto, and an early decision is hoped for respecting this important matter.

THOMAS CRANE PUBLIC LIBRARY.

The citizens may well be proud of this educational institution, furnishing as it does not only pleasure and instruction to the citizens, but assisting also in the work of the school.

Total number of books in library, about 17,000; increase, 645. Number of names on librarian's register, 10,379; increase, 580. Circulation—public, 63,580; public schools, 3,543; total, 67,123.

ADAMS ACADEMY.

This institution still pursues the tenor of its way in giving young men a most thorough education, based on the requirements of Harvard and other colleges. These are much more extensive than in former years, and besides the so-called classical branches, they include extensive study in science, history, English and other languages.

The number of pupils at present in attendance is 50.

POOR DEPARTMENT.

The management of this department is highly commended by those who are familiar with its many duties. Equipped with a thorough knowledge of the laws pertaining to the settlement of paupers, and intrusted with the important duty of ministering to the need of the worthy poor, I believe those in charge are faithful to their trust.

Number of inmates Jan. 1, 1891—19; admitted during the year, 10; total, 29. Number discharged, 7; died, 11; total, 18. Members at date, 11. Number of families aided, 32.

FIRE DEPARTMENT.

A well equipped fire department is demanded not only by the citizens, who wish to have protection for their homes, but by the underwriters, who have an interest also by the risks they take upon the property; and if the city is not mindful in keeping up the standard of equipment, a higher premium may be the result. We have a large amount of taxable property in the Centre, and I believe that a piece of apparatus similar to the one recently purchased by the city of Boston, a combination of "hose and chemical," should be purchased and located in the neighborhood of the city hall. We have been fortunate in our fire losses the past year, and credit is due for the prompt response to alarms from most of the companies. The company at Wollaston is laboring under many disadvantages which I hope to see remedied. But while we have been fortunate, we must be prepared for harder service at all times.

A four circuit repeater is badly needed, but it is no use to consider its adoption until a suitable place is provided for it at the central station. I do not think that any words of mine are needed to call your attention to the poor condition of the hose houses in Wards Two and Four; and before all the suitable land in the latter ward is built upon, the city should purchase a lot upon which to build in the future. I can but repeat the words addressed to the Council of 1890 in reference to the central station,— it is not a suitable place for man or beast, and I trust that some action will be taken this year to erect a station which will be of credit to the city. I do not deem it advisable to build upon the present lot. The great expense of retaining walls at the rear, the expense of building a temporary station while the

new one would be in course of erection, leads me to recommend the purchase of another lot and the sale of the present site with the building thereon.

The Chief Engineer reports the number of alarms, 45 ; fire losses, \$8000 ; insurance on same, \$5000.

The department is handicapped in many sections by the want of more hydrant service ; 101 hydrants on 75 miles of streets is certainly not conducive to good fire protection.

POLICE DEPARTMENT.

I am not unmindful of the need of better police service, and in my judgment we should have a daily patrol in the Centre, and seven men on permanent duty in the thickly settled districts for night service. The problem is to provide the means for this yearly expense, and I refrain from any definite recommendations until I can present to you the estimates for the year ; but I trust that a larger appropriation can be made for this department than heretofore.

This department would be greatly aided by the introduction of the " Police Signal System." This would place each ward in communication with headquarters and secure prompt assistance. I would recommend to the Council to consider the establishment of such a system.

The Deputy Manager of the Police reports: Total number of arrests, 292 ; for drunkenness, 135 ; seizure of liquors made, enforcement of the liquor law, 1.

It will be my duty during the year to carry out the will of the people, and use every effort to prevent the sale of liquor in our city. The citizens have spoken in a most emphatic manner on this important question, and I pledge to them an earnest endeavor to enforce their wishes.

Several gentlemen have assisted the city in maintaining order by serving as constables without pay, and I tender them my thanks for their services.

THE CITY CLERK.

The number of marriages in 1891 was 196 ; deaths, 311 ; dogs licensed, 866.

MILK INSPECTOR.

Inspector reports: Number of licenses issued to dealers, 25; to stores and others, 29; total 54.

Two hundred samples of milk have been tested during the year, and the analyses show that it is up to the standard, as a rule.

CITY PROPERTY.

An inventory of the city property was taken May 1st. The assessed valuation was \$406,422. A detailed statement will be published in the yearly city report.

SEWER ACT.

Agreeably to the order of the Council, a petition was presented to the Legislature for an act to establish a system of sewers, which petition was granted, and on September 28, 1891, the question was submitted to the citizens, and rejected by a vote of 439 No, 247 Yes.

While I realize the great need of a system of sewerage in many sections of our city, still, the objections against the proposed system are so varied and strong that I hardly think it wise to submit the question to the public again the present year, though I believe it would be of great benefit to have public meetings to discuss and explain the act.

Many object to the proposed plan because it does not contemplate the removal of surface water from the streets, but this is not feasible with a pipe line system. The need of surface drainage I have referred to elsewhere.

In many sections the people wish for a supply of water first, and will not accept any system of sewerage until the city owns its own water works.

I am not unmindful also of the growing sentiment, that a city should construct the system and charge rental for those who use it. It has much of merit, and is worthy of discussion.

WATER SUPPLY.

The Council of 1889 petitioned the Legislature for an act to allow the city to establish a system of water supply. This petition was practically refused, and an act was passed by the Legislature of 1891 conferring upon the city the right to take

the waters of Blue Hills river for the extinguishment of fire and other purposes, but only upon the condition of having first purchased the franchise, corporate property, rights and privileges of The Quincy Water Company.

The voters of Quincy have three years from January 11, 1891, in which to accept said act. An acceptance of this act without the purchase of the property of the water company would be the performance of an idle ceremony.

With the modern methods of living, the attractiveness, and consequently the growth of any community must depend more upon its water supply than upon any other factor which enters into the question of a location of a home. Unfortunately for Quincy the sources of water for public use are few and of limited extent, but such as they are they should all be acquired at the earliest opportunity.

At the hearing before the Legislative committee it was proven that the present supply affords only one and a half million gallons daily; and with our rapid growth in population, increased facilities for supplying water must be provided for before the actual necessity is upon us.

I believe that a city should own its own system of water supply. It can then improve the source of supply, abate nuisances when they exist, extend its mains to keep pace with the growth of the city, furnish satisfactory hydrant service, and give to the citizens more satisfactory rates. I believe that the same would become self supporting.

It is unlikely that the company will ever state its selling price, and recourse must be had to the supreme court.

I therefore recommend that this most important subject be taken into consideration, and that the citizens be given the privilege of expressing their opinion upon the question of the purchase of the Quincy Water Company according to the provisions of its charter.

BOARD OF SURVEY.

Few cities in this Commonwealth are so favorably situated as our own, possessing as we do those natural advantages which should be the means of attracting to our midst a most desirable class of citizens. In our legislation we should endeavor to plan for the future welfare of our city, as well as to provide for its present need.

With the seashore for our eastern boundary, affording such an expansive view of ocean, one can readily see the rich returns that would come to the city and to its citizens if a broad highway was constructed skirting the entire shore. It would furnish a beautiful drive for our citizens, and the land adjacent thereto would be most valuable for building purposes.

The river on our northern boundary also deserves our attention. We could carry out the same plan here, and with similar results. At this point we would be co-operating with the city of Boston in their plans for the future.

With the hills on our west, and the ocean on the east, we obtain an inland and sea view unsurpassed in any city or state.

It would indeed be a fatal mistake to permit a territory possessing such natural advantages to be cut up without method or system other than that which suggests itself to the rapacious land speculator as most likely to fill his pocket in the shortest possible time.

In the rapid growth of our city vacant lands are being opened up, houses are built thereon below grade, streets are constructed in the poorest manner, laid out contrary to the city's interest, and then pressed for acceptance. Houses are built in localities where the price of land is moderate, but where from the swampy nature of the soil, it is impossible to secure any cellars. The city is immediately asked to furnish a remedy and bear the expenses of draining.

I therefore would recommend to the Council to petition General Court for an act establishing a "Board of Survey," to consist of three able and discreet men, who shall have the power to cause to be made under its direction plans of such territory or sections of land as said board may deem necessary, showing thereon the location of such highway, whether laid out or not, as said board shall be of opinion the present or future interests of the public will demand; showing clearly the directions, widths and grades of each highway or proposed highway; and that no person or corporation shall in this city prepare or open for public travel any way, unless its location, directions, widths and grades are satisfactory to and have been approved by this board.

I believe that the duties of such board should be made a part of the duties of the Park Commissioners.

BOARD OF HEALTH.

Under the direction of this board the different brooks have been nearly cleared of their obstructions, and I look forward to decided benefit accruing from this work.

A small appropriation only will be needed the present year to complete the needed improvements in our brooks.

PARKS.

But a small amount of money was placed at the disposal of the Commissioners the past year and the same was expended in building a summer house in Merry Mount Park, also completing a street in Faxon Park. I trust that in the near future we shall be able to expend a large amount upon these natural parks, for they will be greatly prized in the future.

GRADE CROSSINGS.

I call your attention to the important subject which must soon demand your consideration, namely — the abolishment of the grade crossings in our city.

The one on Water street is not only a great hindrance to the business interests, but most dangerous to the public. The daily travel is rapidly increasing, and it is also certain that the railroad traffic will, in the near future, still further menace the lives of our friends and neighbors by the frequency of its train service.

We should either endeavor to abolish the crossing, under the recent act of the Legislature, or petition for permission to build a foot bridge over the railroad.

HOUGHS NECK.

One section of our city deserves more attention from the government than it has heretofore received. I refer to Houghs Neck. It has 102 dwellings; its valuation is \$252,650, and pays a tax of \$3,436.

It would only seem right and proper that we should light a portion of that section through the summer months; and also devise a way by which the central station could be informed, if their services were needed in case of a large fire. I trust the Council will consider the needs of this section.

WOODWARD FUND.

This fund has been increased during the year by large sales of land and now amounts to \$279,585.46. The board of managers will undoubtedly during the year take the necessary steps looking to the erection of another educational institution in our midst.

JOHNSON FUND.

The city holds in trust \$2000, and the interest upon the same is annually expended in charitable purposes.

INDUSTRIES.

The rapid increase of our population admonishes us that we should be on the alert to welcome to our midst legitimate and desirable enterprises, so that home employment may be found.

I would therefore recommend that you appoint a committee who would be in readiness to meet all inquiring manufacturers, furnish them with city statistics, information as to land, and the prospect of assistance from our financial men.

Such a committee would also represent the city in the efforts to obtain better railroad facilities and more suitable depots.

CENTENNIAL.

On February 23, 1892, occurs the centennial anniversary of the incorporation of the town of Quincy. The joint committee appointed by the Council of 1890 recommends that its celebration take place on July 4, 1892, also advising that a memorial volume be published.

I also would recommend that the historical places in our city receive our consideration, and a memorial tablet be placed at those points that will link the future with the past.

CONCLUSION.

In conclusion permit me to say that I am grateful for the kind expression of confidence reposed in me by my fellow-citizens by again calling me to direct the executive function of our city, and in the performance of my duties I shall endeavor to be worthy of this mark of approval by bringing to bear a

all questions my best judgment, and giving to the citizens a safe, conservative and business-like administration.

I believe that every faithful public official desires intelligent criticism and suggestions, to aid him in the performance of his duties for it should ever be kept in mind that the end sought for is the city's welfare.

As trustees we have been entrusted for a brief period with the management of the city's affairs, and when another year has rolled along may we all feel at the close that we have done the best we could.

"In deeds, not words" may the record of '92 be—one in which every citizen, regardless of party, can take just pride in.

THIRD ANNUAL REPORT

OF THE

DEPARTMENT OF PUBLIC WORKS

OF THE

CITY OF QUINCY

FOR 1891.

BOSTON :
BROWN BROS. & CO.,
1892.

Third Annual Report

OF THE

Com. of Public Works.

HON. H. O. FAIRBANKS, MAYOR.

Sir :—

I have the honor to present herewith the Annual Report of the transactions of the Department of Public Works for the year ending December 31, 1891.

This branch of the City government is a most important one, embracing as it does the Care and Repair of all Streets and Ways, Construction and Repair of all Public Buildings, Construction and Repair of Bridges, Care of all Street Lights, Contracts with the Water Company, Collection of Garbage and Advertising, Printing, and Stationery.

HIGHWAY DEPARTMENT.

The large number of miles of streets within the limits of our City and the nature of the traffic over them, make the care and maintenance of our streets both difficult and expensive. Nothing but block stone pavement will withstand the continual wear of our heavily loaded stone teams on such streets as Granite, Copeland and Water streets. It seems to me that some special legislation should be granted, obliging heavily loaded

teams to use wider tires. Although such legislation has been asked for and refused, continued effort should be made until we eventually succeed.

The amount of money placed at my disposal for General Repairs was \$14,420., a sum totally inadequate to properly care for our streets. This sum is for maintenance of horses, purchase of tools, material and pay of men.

On assuming charge of this Office, I carefully examined the plant and tools belonging to the City. The supply of tools was small and poor, the Steam Road Roller was practically disabled and required an expenditure of over \$600. to put in repair for practical work. A new horse had to be purchased for use of the department and to be used by the Fire Department in case of fire; said horse being kept and used in West Quincy. The Stone Crusher was also repaired at considerable expense and new tools purchased.

These expenditures all come from the appropriation for streets and leaves the amount actually expended upon streets something less than \$13,000. My predecessor in office, employed a superintendent to oversee the work in the various parts of the City, but the wants of the City being large and also believing that more and better work could be received by a personal oversight I dispensed with his services and employed only working foremen. This was a saving to the City of over \$1600 per year, and the practical results have been satisfactory to me although at times the cares of the office together with the superintendence of streets, and the overseeing of the building of the Willard School was burdensome.

Notwithstanding the small amount of money at my disposal by strict economy a large amount of work has been accomplished in the way of repairs, and while aware that many streets and sidewalks are sadly in need of repairs, no more could be done and keep within the appropriation.

One of the most serious difficulties in the care of our streets at the present time is the care of the surface water. Many of our streets are badly laid out in this respect, in many of them there is no way provided other than draining into low lands alongside of the street, and as these lands are being rapidly built upon, this matter of drainage must be provided for otherwise.

In many places this is a serious problem as the grade of the streets will not admit of surface drainage in either direction. The only way will be by sewer or underground drain, in places carried long distances. If a system of sewers is ever established, provision for surface drainage should be provided for at that time by separate pipe or pipes laid to our brook, with catch basins at convenient distances. As this will be a most important step toward the care of our streets, the grade of the street must be such, as to quickly care for the water, as no street will be long passable when water is allowed to stand, or is kept in a moist state by water becoming confined in ruts or low places. A street in order to be good must be quickly drained.

PAVED GUTTERS.

The Council appropriated the sum \$3000 for Paved Gutters. This to my mind is one of the best expenditures that has been made this year and a large amount of work has been done. I have selected such places as in my judgment was most needed and as there are miles of streets and hillside gutters that should be paved, it is to be hoped that a larger sum will be appropriated this coming year as the saving to the City in repairs will fully equal the interest upon the money invested. No better investment can be made by this City than that of paving its gutters. Paving has been done on the following streets—

Goffe	211 ft.
Granite	304 ft.
Franklin	900 ft.
Pearl	858 ft.
Washington	1800 ft.
Adams	988 ft.
Reardon	840 ft.
Bates Ave	150 ft.
Newbury	150 ft.
Atlantic Ave	90 ft.
Chestnut	300 ft.
Prospect Ave	248 ft.
Newport Ave	190 ft.
Beale	38 ft.
Winthrop	39 ft.

STREET CROSSINGS.

The Council appropriated the sum of \$2000 for Street Crossings. A number of stone crossings have been placed in various parts of the City. This is very gratifying to, and appreciated by, the people.

The following is a list of places where such walks have been located.

Chestnut street.

Hancock street.

Foster street.

Cottage street.

School street.

“ “

Granite street, near School street.

Marsh street.

School street, cor. Franklin street.

Garfield street.

Copeland street.

Billings street.

Prospect street.

Prospect street.

Atlantic street near Prospect street.

Washington street front of Library.

Washington street near Foster street.

Washington street.

Elm street foot of Union street.

Union street.

Quincy Depot.

SIDEWALKS.

This is a matter that should receive more attention and different methods produced for the building of sidewalks, of which we are sadly deficient. The larger part of our walks are without edgestone and it is almost impossible to maintain a walk without them, the putting on of gravel or stone dust is of but temporary use, as the edge is soon washed into the gutters and carted away in the form of mud.

The Council appropriated the sum of \$1,000 for edgestone where the abutters pay one-half. 2351 feet of edgestone have been laid and a good gravel walk built where application has been made by an abutter agreeing to pay one-half the cost. The total number of feet of edgestone laid in all sections is 5,417.

Nothing enhances the value of a piece of property so much as a good sidewalk with edgestone, and I hope that some system of uniform walks, either brick or concrete will be started in this city at an early date.

A brick walk with edgestone has been laid around City Hall and also upon the northerly side of the street, thus giving foot passengers a clean walk to the depot and is much appreciated by all. Over 1,000 feet of edgestone has also been taken up and relaid during the past year.

DRAINS AND CULVERTS.

A large catch basin has been constructed upon Common street from which a pipe drain was laid under the sidewalk to Adams street, where the water reaches Furnace Brook. I believe this drain will care for all the water which comes from the Quarries above, and remedy the trouble which was experienced last winter by the large flow of water at this place.

A catch basin was also constructed on Garfield street, a pipe drain laid to the bottom of the hill near Prout's store, and from there to and across Copeland street to the brook a stone drain was laid. This drain has also in past seasons caused a great deal of trouble and annoyance to that section, and while at certain seasons of the year a very large amount of water must

be provided for, it is believed that the drain will properly care for all the water from that section.

A catch basin and underground drain was also constructed upon Washington street, two culverts on Woodbine street and Greenwood avenue, several stone drains relaid and enlarged in other sections, and much work of that nature performed during the year.

HANCOCK STREET.

The City Council passed an order for \$10,700 for the completion of Hancock street. This street was practically completed as far as Squantum street. That part which lies between Squantum street and Neponset Bridge was in various stages of progress, the paving was all laid but where the roadbed was constructed across the meadows, it had become very uneven on account of the settling of the road bed, and a portion was taken up and relaid. The balance of the street to Neponset Bridge was filled to grade and width. 1,783 feet of edgestone was set and a substantial fence was constructed upon either side where required.

That portion lying between the Railway Bridge and Neponset Bridge was filled with stone and well rolled with the Steam Roller and is a fairly good street, but that portion lying between Squantum street and the R. R. Bridge continued to settle so that all that could be done was to fill with gravel from time to time until it reaches a firm foundation. This will probably require several years as it has been filled to grade three times this year, and as the paving had settled in such an uneven manner early in December, gravel was used over the paving in places to make safe and passable for the winter. Considerable work must be done on this portion of the street in the early spring. A portion of this appropriation still remains unexpended.

WASHINGTON STREET.

An appropriation of \$10,000 was made for the rebuilding of Washington street from Quincy Point Bridge to Foster street, a distance of two miles. This street was built some years ago and had become badly worn and most difficult to

ride or team over, as the top surface had become entirely worn out, leaving nothing but the large stone of which the foundation or road bed was composed.

After removing the mud and dust, the road was picked up by the Steam Roller and resurfaced and regraded by crushed stone the entire length to a depth of from 8 to 15 inches and well rolled to a smooth surface. Considering the cost (which is but slightly more than a gravel road) is one of the best streets in our City, it being located near the Stone Crusher and the short distance in teaming in part accounts for its cheapness. The traffic upon this street is very large, in fact, I believe that with the exception of Hancock street there is more teaming upon this street than any street in Quincy, and proper attention at the proper time must be given this street or it will soon become full of ruts, and if the water is unable to drain off, the road bed will become softened and a poor road will be the final result.

REARDON STREET.

Reardon street leading from Common street to the brook was ordered built by the City Council and \$1650 appropriated therefor. The street is 839 feet long and as a large amount of water must pass over this street to the brook, an edgestone and paved gutter was required for its entire length.

The street was built of gravel and is in good condition for travel.

ADAMS STREET.

The Council appropriated \$2500 for the improvement of Adams street commencing at or near the residence of the late Joseph Robertson. This portion of the street was in a very bad condition and required a large amount of stone to bring the street to a grade. Also owing to the distance that crushed stone had to be hauled, but a short piece of the street was built. Adams street, being one of our main thoroughfares to Milton and other towns, and also being one of the best residential streets in our City, should be completed and put in better condition for its entire length.

BOTOLPH STREET.

The City Council appropriated the sum of \$500 for the grading of Botolph street and for building a drain to carry off the surface water. A catch basin was constructed and a drain laid to the brook a distance of about 260 feet, and the street was partially graded. An expenditure of about \$250 will be required to complete the grading.

The plant where the stone crusher is located is on land of Terrance Keenan and consists of a jaw crusher and portable engine for supplying power. I would most strongly urge the purchase or lease of this or some other suitable quarry for the getting out of stone for road-building purposes, and locating thereon a permanent plant and also stables and sheds for our teams.

A permanent plant should consist of another crusher of improved pattern, a building with bins, elevator for handling stone after being crushed, and a larger engine. With this plant stone can be handled much cheaper than we are now doing. The stables now in use by our teams are inadequate for their use, and by locating the teams at the crusher, much work can be done at little or no expense.

This plant is absolutely necessary and should be established at once on the ground of economy, convenience and actual necessity. Gravel is becoming each year harder to obtain and much that can be purchased (as the City has none of its own but purchases by the load wherever it can be found) is unfit for road-building purposes. While the cost of crushed stone is somewhat more than gravel. I am firmly of the belief that it is economy to build and repair our roads with stone instead of gravel. The quality of the stone in this city is inferior to that of other places, it being of such a nature that it easily crushes. And this fact together with the amount of traffic over them accounts for the rapid wear of our streets.

A street once constructed should be constantly looked after at all times, as it soon spoils after it becomes full of ruts and depressions.

With the small appropriation for repairs it is impossible to do this and also keep in repair the many miles of street in our City. A larger appropriation must be made for repairs of streets. The people demand better streets and walks and there

is but one way to get them — appropriate more money and build faster than they wear out instead of the opposite course which has been pursued in past years — allow them to wear out faster than repairs were made.

I believe that in a few years with a reasonable amount of money judiciously expended, a great and lasting improvement can be made upon our streets.

GENERAL REPAIRS.

General repairs have been made wherever it was deemed most needed in the various parts of our City. The money has been nearly equally distributed in the different Wards, although I have paid no attention to Ward Lines if I deemed one section of our City more in need of care or attention than another. I have tried to avoid all party and sectional feeling and have endeavored to give to the citizens of Quincy the largest possible returns for the money at my command, and while all of our streets have not been put in first-class order, I feel that some improvement has been made during the past year in the general condition of the streets.

REMOVAL OF SNOW.

The amount of snow was unusually large during the past year and the expense of caring for removal was accordingly large. I have this year purchased three additional snow plows for sidewalk use, as several miles of new street and a large number of new houses have been added to the territory to be covered this year, and in order that prompt service may be given, these were deemed necessary. This will again illustrate the growing needs of the street department for larger appropriations.

The Commissioner is criticised throughout the City for neglect of repairing and cleaning streets, blamed that the dust should blow, or that the mud should be allowed to accumulate, while they fail to realize the immense amount of territory that is within the City's limits, and while a large majority of the citizens see or know of but little more than that which lies in their immediate vicinity, wonder why this or that is not done. They do not stop to consider that there are 75 miles of street that also require some attention as well as their own immediate

neighborhoods. I ask that a reasonable time be granted this department in the cleaning of the walks around about our City, as I assure the citizens that no reasonable effort will be spared on my part to give prompt service.

COLLECTION OF GARBAGE.

The collection of garbage has been attended to this past year as well and as promptly as could be done with the one team which is kept for this purpose. There is a large demand for the removal of ashes and other rubbish, but little of this work has been done as it requires nearly the entire time of this team for the collection of swill, and the money at hand would not allow of additional team or teams. I would recommend that some provisions be made for such work during the coming year.

The sale of swill during the past year greatly exceeds that of previous years and materially assists towards paying the expenses of the department. The money statement will be found in Auditor's Report.

PUBLIC BRIDGES.

The repairs of public bridges have been cared for during the past year as usual. It was found necessary to replank the Neponset Bridge its entire length, and bids for the work were advertised for in the local papers. The contract was made with A. L. Litchfield who performed the work in a satisfactory manner.

The Quincy Point, and also the Hingham and Weymouth Bridges required repairs and the work was done jointly by this City and the towns mentioned. The last mentioned bridge is quite poor and doubtless before many years will require rebuilding.

PUBLIC BUILDINGS.

The charter of this city specifies that the construction and repair of public buildings shall be done under the direction of the Commissioner of Public Works. But not until this year has it been the duty of the Commissioner to look after the repairs of the School Buildings. This is an added duty to his already numerous and varied cares. It would seem to me that the School Committee should be the proper custodians of school

buildings and have charge of all necessary repairs. An inspection of the various buildings showed as a whole that they were in a fair condition.

The Coddington School building and the Annex were in the most need of repairs. The main building was in need of paint both inside and out, gutters, conductors, and a part of the sills were found to be rotten. The building was put in thorough repair at quite an expense. The Annex was also shingled and painted. The sanitary at the John Hancock was found in a most filthy condition and was thoroughly overhauled and put in good order. Slight repairs were also made at the other school buildings where needed. The engine houses throughout the city are in very poor condition and something must soon be done. The Central Station and also the Hose House in Ward 4 are in very poor condition and it seems a waste of money to make more than temporary repairs. New buildings must soon be erected to accommodate the fire apparatus. As an extended report of the needs of the department will be made by the chief engineer, reference is hereby made to his report.

CITY HALL.

There have been but slight repairs made upon this building this year, and the building remains in the same condition as to the interior arrangement of the offices as it has in the past. The City Council authorized a set of plans to be made for the remodelling of this building, so as to better accommodate the business of the city, but no further action has been taken. It is to be hoped that this much needed improvement will be made in the near future.

WILLARD SCHOOL.

The contract for the building of the Willard School House was given to Messrs. I. & E. H. Cushing, Dec. 13, 1889. It progressed slowly until January last, when, owing to the failure of the Messrs. Cushing, the building was taken possession of by the city, January 17, 1891, and then placed in my hands for completion.

It being in mid winter and the roof not having been made tight and three of the gable ends unfinished, it left the building to the mercy of the elements. The floors and walls were cov

ered with ice and snow and I realized that prompt action should be taken. I was fortunate in securing the services of Mr. Jonas Shackley, a well known citizen and builder, and a force of men was immediately secured. Material was purchased for the completion of the building according to the plans and specification.

In order that the building should be ready for occupancy in September, the work was pushed as fast as possible and early in August the building was ready for the furniture. The Smead System of heating and ventilating was adopted and accordingly put in. As yet the system has not worked in a satisfactory manner owing to the unequal distribution of heat. Some rooms are found to be too warm while others are insufficiently heated. It is hoped that this fault will be remedied and experiments to that effect are being made. It requires a large amount of coal to run the twelve furnaces and the system is a very expensive one. The grading of the grounds was quite an item of expense, as a large amount of filling was required. The total cost of the building was far in excess of the original contract, and an extra appropriation was made by the Council.

Much of the credit for the completion of the building is due to the untiring energy of Mr. Shackley who devoted his entire time, and best efforts to complete the building at the least possible cost to the city and at as early a day as possible.

STREET LIGHTS.

The streets of our city are lighted by 89 Arc, 105 Incandescent, 68 Gas, and 127 Oil Lamps. There is a great and growing demand for more light and while street lights are appreciated by all, it is well to consider that the present system of lighting nearly equals the appropriation for Miscellaneous Repairs upon streets and sidewalks throughout the city. One is a luxury, the other is a necessity.

In conclusion, I wish to thank His Honor, Mayor Fairbanks, the various officers in the city government and the public generally for the hearty support and encouragement which they have given me during the past year.

Very respectfully,

W. WALTER ELWELL.

Commissioner of Public Works.

Report of the OVERSEERS OF THE POOR.

QUINCY, MASS., Jan. 2, 1892.

TO HIS HONOR MAYOR OF THE CITY OF QUINCY:

I herewith respectfully present my report as Overseer of Poor, of Quincy, year ending Dec. 31, 1891.

Our Almshouse has been under the charge of Mr. and Mrs. Franklin Jacobs the past year, who have been faithful to their trust as in the past. There have been admitted, during the past year, ten persons, discharged seven, and eleven have died, most of whom were elderly persons. Our death rate was very large, la grippe being the primary cause; four of those who died were seriously ill when admitted. There are at present eleven inmates.

Respectfully yours,
GEORGE H. FIELD.
Overseer of Poor.

Support of Poor.

Police Department.

TO HIS HONOR THE MAYOR OF THE CITY OF QUINCY.

Sir — I have the honor to respectfully submit the following report of the Police Department for the year ending December 31, 1891.

Total number of arrests during the year, 293.

Of this number 234 were committed to the station house. The different offences for which they were arrested are as follows :—

Assault	50
Assault on officer	1
Attempt to rescue prisoner	1
Adultery	1
Bastardy	2
Breaking and entering	3
Disturbing the peace	21
Default warrant	2
Drunkenness	135
Evading R. R. fare	1
Embezzlement	1
Forgery	2
Fast driving	2
False Pretences	2
Keeping unlicensed dogs	3
Larceny	23
Liquor nuisance	5

Lottery	1
Keeping children under five years of age	1
Insane	5
Malicious mischief	4
Peddling without license	4
Peddling jewelry	1
Polygamy	2
Selling cigarettes to minors	1
Selling milk not of standard quality	2
Truancy	1
Tramps	9
Violation city ordinance	4
Violation Sunday law	2
Siezure of liquors	1
Number of lodgers	509
Number of lodgers, 1890	629
Number of tramps, 1890	42
Number of persons released from station for drunkenness	50
Number of persons released by court for drunkenness	12

As will be seen we have entertained one hundred and twenty less lodgers and thirty-three less tramps than last year. More work has been done by the department than in any previous year, the many calls made on the force during the year, have promptly complied with. And I am of the opinion that the time has come when the City of Quincy should have a night patrol of at least eight men.

Respectfully submitted,

GEORGE O. LANGLEY,

Deputy Manager of Police.

Report of City Solicitor.

FROM JAN. 1, '91 TO JAN. 1, '92.

TO THE HONORABLE HENRY G. FAIRBANKS, MAYOR OF QUINCY:

SIR: On January 1, 1891, the following actions were pending in the Superior Court for Norfolk County against the city.

Isaac Shute *vs.* City of Quincy.

Charlotte Shute *vs.* City of Quincy.

Chas. H. Loring, adm'r *vs.* City of Quincy.

John Keating adm'r *vs.* " " "

Patrick Brennan *vs.* " " "

A brief description of each will be found in the official report of my predecessor, Wm. G. A. Pattee, Esq.

During the past year actions have been brought in said Court against the city by Emma Castiglioni, Thos. Devine, Michael McGovern and Peter Cumiff.

The Castiglioni case is an action for injuries received from falling upon the sidewalk on Pierce street on the morning of January 13, 1891, damages claimed at two thousand dollars. Mr. Devine sued for injuries to his horse and wagon, alleged to have been received on January 12, 1891, in consequence of the defective condition of the highway called Randolph avenue near its intersection with Forest street; damages claimed at five hundred dollars. The McGovern case is brought to recover the sum of one hundred and six and a half dollars as compensation for the use of a derrick by Commissioner Pritchard.

The Cunniff case is a bill in equity in Supreme Judicial Court, Norfolk County, against Commissioner Ewell and the City, praying for an injunction to prevent the moving of Cunniff's house from the limits of Hancock street as widened and for damages. Cunniff claims title to a large part of the street by long adverse occupancy. This action has been partly tried and is suspended temporarily. Charles E. Stratton and others have brought in the same court, in Suffolk County, a petition for a writ of certiorari, with prayer for an injunction against the Board of Health of the city, based upon the action of said Board in abating a nuisance near Botolph street, Atlantic. Each of the foregoing actions is still pending.

Early in the year many petitions were filed by persons claiming liens upon the Willard school-house, all of which have been disposed of except that of H. O. Souther, which is now pending in the Superior Court. Mr. Souther claims two thousand two hundred and five dollars and sixty-one cents for labor performed and furnished in the construction of said school-house.

During the year many legal opinions have been written upon various subjects at the request of the City Council, the Mayor and municipal officers respectively.

Respectfully submitted,

F. L. HAYES,

City Solicitor.

Report of the INSPECTOR OF MILK.

DEC. 31, 1890 to DEC. 31, 1891.

TO HIS HONOR THE MAYOR OF THE CITY OF QUINCY:

Sir;—

I have the honor to submit the following report of the Department of Inspection of Milk, for the year of 1891;—

The principal duties of the Inspector, as defined by the statutes under which he acts, are the issuing of licenses, the registration of stores where milk is sold, collection and inspection of samples, and the enforcement of the laws in the courts.

LICENSES.

The statutes governing the sale of milk require that every person who conveys, in carriage or otherwise, the same for the purpose of selling within the city limits, shall be licensed annually by the Inspector of Milk, and shall pay fifty cents to the use of the city. Every person before selling milk, or offering the same for sale in a store, booth, stand or market-place, shall register in the books of the Inspector, and shall pay fifty cents.

Licenses are issued only in the name of the owners and may not be sold, assigned or transferred. Each license records the name, residence, place of business, number of carriages or

other vehicles used, the name and residence of every driver or other person in carrying or selling, and the number of the license.

The licensee is required to cause his name, the number of his license and his place of business, to be legibly placed on each outer side of all carriages or vehicles used by him in the sale or conveyance of milk, and to report to the Inspector any change of driver or other person employed. For failure to comply with these requirements, or for selling or exposing for sale, from carriage or other vehicle, without first being licensed, a fine of not less than thirty nor more than one hundred dollars may be imposed. Repetition of the same offence calls for still higher penalties.

Failure of register for the sale of milk from a store is punished by a fine not exceeding twenty dollars.

Number of licenses issued to dealers conveying milk by carriage or otherwise	25
Number of Registrations of Stores, and others engaged in the sale of milk	29
Total number of licenses and registrations	54

INSPECTION.

The inspector or his authorized collectors are empowered to enter all places where milk is stored or kept for sale, and all carriages used for the conveyance of milk, and may take samples of the same for analysis; and he shall cause the samples so taken to be analyzed or otherwise satisfactorily treated, the results of which examination shall be recorded and preserved as evidence. The owner or custodian has the right to demand and receive a sealed portion of the sample, for his own use in the case of complaint.

QUALITY OF MILK SOLD IN QUINCY.

The work of inspection has gone on continuously during the year and two hundred (200) samples of milk, from Wagons and Stores, have been taken and analyzed.

These analyses show that the milk is of good quality and up to the standard required by law, few samples having been taken that were poor.

QUANTITY OF MILK SOLD IN QUINCY.

The estimated number of quarts of milk for average daily consumption is five thousand (5000) of which two thousand five hundred (2500) are raised in Quincy.

There have been few complaints made as to the quality of the milk, and no prosecutions.

THE MILK STANDARD.

For the proper enforcement of a law to prevent the adulteration of milk it is necessary that a certain fixed standard of quality shall be prescribed. In the Commonwealth of Massachusetts the statute requires that, to be of good standard quality milk must yield on analysis not more than eighty-seven per cent. of watery fluid, nor less than thirteen per cent. of milk solids, nor less than nine and three tenths per cent. of milk solids exclusive of fat, except during the months of May and June, when it shall contain not less than twelve per cent. of milk solids.

Respectfully submitted,

CHARLES W. GAREY.

Inspector of Milk.

Report of City Clerk.

TO HIS HONOR THE MAYOR:

SIR: I have the honor of submitting herewith the third annual report of this office, for the year ending Dec. 31, 1891, as follows:

RECEIPTS.

For marriage licenses	\$94 50
“ various other licenses	137 00
“ dog licenses, 866 at 20 cents each	173 20
“ recording mortgages, etc.	156 95

Total	\$561 65
-----------------	----------

The above sums have been paid to the City Treasurer and receipts taken therefor.

Number of marriage intentions recorded	189
“ “ marriages recorded	199
“ “ deaths “	320
“ “ births “	647

Number of dogs licensed 866, males 792, females 74, for which the sum of \$1954 was received, and the same, less fees for collection, has been paid to the County Treasurer.

CHRISTOPHER A. SPEAR,
City Clerk.

Report of PARK COMMISSIONERS.

TO HIS HONOR HENRY O. FAIRBANKS, MAYOR OF QUINCY:—

The policy of expending the limited appropriation for the Parks in Quincy to the purpose of carrying out the most needed improvements, has been followed during the year 1891, by the board.

Merry Mount Park is so rich in natural beauty, that when it is properly laid out on a regular plan, it will be one of the handsomest public pleasure grounds in the Commonwealth. With the limited amount appropriated, we have only been able to make some of the most needed improvements.

We have built a summer house on the grounds where visitors can rest sheltered from the sun and enjoy a view of the harbor, a driveway has been constructed from the main entrance to the beach, and some minor improvements made.

On Faxon Park some of the underbrush has been cleared away, a driveway built on the eastern side, which now extends all the way round the Park.

Mr. Sheldon of West Quincy having tendered to the commissioners, a section of the old Granite railway, the first built in America, we recommend that it be placed in Merry Mount Park with a suitable inscription.

We recommend that the sum of one thousand dollars, with the income be appropriated for both parks for the year 1892.

Respectfully submitted,

JOHN F. MERRILL,	}	<i>Park Commissioners.</i>
WILLIAM B. GLOVER,		
GEORGE CAHILL, Secretary,		

QUINCY, DECEMBER 31, 1891.

Report of the BOARD OF HEALTH.

TO HIS HONOR, HENRY O. FAIRBANKS, MAYOR OF QUINCY :—

The Board of Health beg leave to submit the following report of work done on brooks during the year 1891.

On the evening of July 20, a petition was presented to the Board of Health signed by James Edwards and others, complaining of the overflow of Town Brook, and declaring that the wet and marshy lands caused by said overflow was a menace to the public health, and further that the overflow was due to obstruction along the course of said brook.

The Board, after discussing the matter, voted to inspect Town Brook on Tuesday, July 21, at 3.30 P. M. On that date an inspection was made after which it was declared by the Board to be a nuisance and it was voted to hold a public hearing, regarding its abatement on Wednesday evening, July 2^d, at eight o'clock. At this hearing, as no objections were made by those present to the plan proposed by the Board, the meeting adjourned. On Aug. 3 at a meeting of the Board, it was voted to abate the Town Brook nuisance and to employ Commissioner Ewell as the agent of the Board in carrying out the work. The abatement of this nuisance was, therefore, accomplished under the immediate supervision of Mr. Walter C. Ewell, who has done this work in the thorough and conscientious manner which has characterized all his operations, and the expense charged to the City, a sum of \$881.28, having been

previously appropriated for the work of clearing out brooks. In a like manner, the abatement of Furnace and Sachem brooks nuisances, has been accomplished. The petition asking for the abatement of the nuisance caused by the overflow of Furnace brook and signed by Mr. Monohan Breen and others, was read at a regular meeting of the Board held on Aug. 24. The inspection and declaration of abatement took place on the afternoon of Aug. 27, and a hearing relating to the same was held on Tuesday evening, Sept. 8.

On Sept. 25, a petition signed by Mr. J. W. Lovett, was read, asking that the Board have obstruction removed which caused the overflow of Sachem Brook, situated in that part of Quincy known as Wollaston. The inspection and declaration that the brook in its present condition was a nuisance and should be abated, occurred on the afternoon of Sept. 28, a hearing of those concerned being held on Oct. 9, and the work of abatement was commenced at once.

The Board of Health of the City of Quincy begs leave to submit the following report for the year 1891.

The Board was organized on February 2, 1891, by the choice of Dr. Joseph M. Sheahan as chairman, Dr. G. B. Rice, as secretary, Mr. B. F. Thomas as committee on finance, and Mr. J. W. Hayden was appointed inspector. The number of meetings held during the year was twenty-eight, besides numerous inspections and informal meetings. The inspector furnishes the following table of nuisances and abatements, viz., number of inspections made, three thousand, five hundred, forty-two; nuisances discovered, three hundred, forty-eight.

The following table gives, in detail, the character of nuisances found together with the number of abatements.

	Discovered	Abated.
Unventilated drains, . . .	3	3
Broken sink drains, . . .	16	16
Sink drains stopped up, . . .	12	12
Imperfect privy vaults, . . .	15	15
Privy too near well, . . .	2	2
Privy too near brook, . . .	1	1
Privy too near street, . . .	1	
Uncleaned privy vault, . . .	127	123
	<hr/> 179	<hr/> 172

	177	172
Uncleaned cesspool,	58	57
Cesspool too near well,	4	4
Filthy yards,	22	22
Contaminated well,	3	3
Sewage running into street	6	6
Sewage running under house,	5	5
Sewage running into cellar,	14	14
Filthy drains,	12	12
Pig pens,	5	5
Unburied carcasses,	23	23
Decomposing fish offal,	3	3
Decaying fruit,	6	6
Decaying meat,	3	3
Filthy cellars,	4	4
Stagnant ponds of water,	2	2
Filthy cistern in cellar,	1	1
	<hr/>	<hr/>
	348	342

In most cases a simple notification to the offending party has been sufficient to cause the removal of the nuisance, and in no case have we been obliged to resort to legal measures. On the contrary, we note with satisfaction the growing desire on the part of the public to co-operate with the Board in securing the sanitary welfare of the City.

The most important work performed during the year has been, unquestionably, that which was done upon the various water ways of the City. Under the supervision of Mr. Walter Ewell Commissioner of Public Works, whom the Board appointed as its special agent, the Town Brook, Sachems Brook, and Furnace Brook have been very thoroughly cleaned out, widened, and deepened. The value of these operations must be apparent to all, and we desire to express to Your Honor and to the gentlemen of the City Council our full sense of the courtesy shown to us in putting at our disposal the funds necessary for the purpose. The abatement of the nuisance known as Teal Pond is yet in progress and we hope, at no distant day, to report to you the successful completion of the work.

In regard to the prevalence of contagious and infectious diseases our Secretary furnishes the following statistics.

Number of cases of Diphtheria,	18
“ “ “ “ Scarlet fever,	22
“ “ “ “ Measles,	54
“ “ “ “ Typhoid fever,	22
Deaths from Diphtheria,	2
“ “ Typhoid fever,	6
“ “ Measles,	1

Unfortunately, the above table is not of sufficient accuracy to give more than a general idea of the prevalence of these diseases and the percentage of deaths, this inaccuracy being due to the negligence on the part of our physicians in reporting cases coming under their care. We would, therefore, earnestly ask their attention to Reg. 14 of the rules and regulations of our Board, as non-compliance with it renders our statistics practically valueless.

In our last report we mentioned the fact that in many sections of the city, dwelling houses are constantly in process of erection upon soil so saturated with moisture that it becomes impossible to build cesspools or to secure dry cellars. This abuse continues; but we are gratified to observe that it has attracted the attention of Your Honor and that you have proposed to the City Council the adoption of remedial measures, to which we give our hearty approval.

General appropriation for the Board,	\$515 00
Paid to Mr. J. W. Hayden for inspection	\$402 76

Respectfully submitted,

JOSEPH M. SHEEHAN,	} <i>Board of Health.</i>
GEORGE B. RICE,	
BENJAMIN F. THOMAS,	

Report of the CHIEF ENGINEER.

TO HIS HONOR, THE MAYOR OF THE CITY OF QUINCY, HENRY
O. FAIRBANKS,

Dear Sir:—For the third time, I hereby present my annual report as Chief Engineer of the Fire Department of the city of Quincy, in compliance with the requirements governing the same, together with a list of the members with their rank, age, residence and occupation, location of fire alarm boxes, fires and alarms, inventory of property in possession of the department at this date. It being the easiest part of a report to make suggestions in regard to the wants and necessities to keep up the efficiency of a Fire Department, I wish to make just a few that would in my opinion be a great benefit, not only to the department but to the property owners in this city. And in so doing I shall feel that my part has been done whether the Council take any notice of it or not.

FORCE OF DEPARTMENT.

The force of the department is the same as last year, and is as follows: one chief engineer, six assistant engineers, (one from each ward or charter provider) six permanent men, and sixty-three call members; also one man who takes care of the Chemical Engine, No. 1, now located at Hough's Neck, making the entire force of the department seventy-seven men. And it gives me great pleasure to repeat that portion of my

report of 1890, where I stated they were all good workers and had responded and attended to all duties very promptly that they have been called upon to perform as firemen.

APPARATUS.

The apparatus consists of one Amoskeag steam fire engine, one hook and ladder truck fully equipped, three hose wagons, two four wheel hose reels, one hose pump, two chemical engines, two hose jumpers, one supply wagon, and one light express wagon used in the fire alarm service.

Extensive repairs have been made on one hose wagon this year and is now as good as new. A new brake has been put on Hose 2 and Chemical No. 2 has been put in running order. Hose 2, Hose 3, and Chemical 3 must be painted next year. An addition of an extension ladder on Truck 1 will in my opinion be a great benefit, and I recommend that the same be added. Much has been said about a Chemical Engine being located in the Centre. In my report of last year, I recommended that the engine now located in Ward 6 be moved to the Centre; but as I am now one year older in the service and have noticed to some extent the growth of our city, I would recommend that that Engine remain just where it is and that a new one with hose carriage combined be purchased, together with a pair of horses, and located as near the City Hall as a piece of available land will permit. It will also be necessary that two permanent men and five call men be added to the force.

I will just here add that I have great faith in chemical engines and hope that the Committee on Fire Department will take notice of this particular part of this report. (Read it over anyway, gentlemen. A copy will be furnished you.)

HOUSES.

Houses of the Department, with the exception of the new one (in ward 6) are unfit for the purposes of Fire Department. The Hose House in Ward 5, with an expenditure of about two hundred and fifty dollars, could be put in a condition that would probably answer all purposes for the next ten years, for

the immediate section it now covers. The house at Hough's Neck will answer for the present with a coat of paint.

Repairs on any of the other houses of this department I believe to be poor economy, and will not recommend any. New houses *must* be built. A new Central Station has *got* to be built, and if not commenced at an early date, I do not wish to hold myself accountable for any accident to horses or apparatus or any inefficiency of the department in consequence of the present poor, delapidated quarters. Plenty of notice has been given as to the condition of the Central Station, and it is not only known to every councilman, but I think I can safely say to every man, woman and child not only in this city but in other places as well; and there is no excuse, none whatever, why Quincy should not have as good if not better than any other city of its size. And if the Committee on Fire Department would interest themselves, just a little, and make an early report, I do not see why a new station could not be made ready to move into by Aug. 1, 1892. It is hoped by your chief engineer that the next committee will wake up and be a live one, and will be more than interested in this part of this report.

HOSE.

We have at this date about 6,500 feet of hose in apparently good condition, and about 400 feet that is not reliable. Hose for the Chemical Engines was all new this year, and will probably answer if no serious accidents should occur.

I would recommend that 1,000 feet of fire hose be added, this addition will be necessary to keep up with losses, although losses this year have been very small.

WATER.

In regard to the water question I don't know hardly what to say. I want more hydrants. That part of Ward 3 known as the New Plains is entirely destitute of water as far as fire service goes, and as near as I can estimate the wants, it will take ten Hydrants to cover the property in that section. There are also other sections of our city that are in as bad a condition. That part of Ward 4 called the Rail is similiar to Ward 3 and

has no protection whatever seven months in the year. An addition of seven hydrants in that locality would be a great advantage and a necessity, none can dispute. Then there are other scattering places, and I will call your attention to the order introduced to the Council where I recommended the addition of twenty-seven hydrants. There have been no hydrants added this year; the total number at this date is one hundred and one, the average pressure is about seventy-five pounds, which in my judgment is good fire service as far it goes. It is sincerely hoped by your Chief Engineer that an extension of the Quincy Water Company's pipes will be made and hydrants be added next year. I must have water or down goes the building.

It also appears proper for me to again call your attention to the Hough's Neck District. At this time there are about one hundred and twenty-five buildings in that District, the value of same in my judgment is about one hundred and fifty thousand dollars. (I have not seen the assessors books.) In regards to water for fire service in this section there is nothing at the present time and as I stated in my last report, if a satisfactory trade or contract cannot be made with the Quincy or Weymouth Water Companies, there is but one other way (and that I would not consider reliable) the construction of a Reservoir on land owned by N. B. Fernald, the cost of same I know nothing of, but my opinion is that the expense would be considerable to maintain the same in keeping it cleaned out &c. In making the statement that there is but one other way I wish to correct myself a little and say that I know of no other way at the present time, and would suggest that the Committee on Fire Department visit Hough's Neck at an early date and make some report as to the best method of fire protection in that section. A method of giving an alarm would be a great advantage and I would recommend that a loop be run as far as the Chemical 1 Engine House at that place and a Fire Alarm Box be located there, also an alarm box be located at the junction of Coddington street and Palmer street or what is more commonly known as Mosquito Woods. The cost of construction independent of other lines with the signal boxes added would be in the neighborhood of six hundred dollars, for a first class job.

RESERVOIRS.

There are 16 reservoirs 10 of which are self-filling or supposed to be and Nov. 20th were in as good condition as usual. There have been no repairs on the same with the exception of an extra plank being put in to replace an old one. I have no confidence whatever in these Reservoirs and do not believe they would last the steamer with two lines of Hose in a dry time over one hour, this statement is meant for the best one, others would not last ten minutes. They are no good.

FIRE ALARM.

It gives me great pleasure to say that the Fire Alarm which still remain under the care of Gilbert M. Wight has worked as well throughout the entire year as it did in the two preceding years under his management.

There are now about thirty-one(31)miles of wire all in one circuit which makes the duties of the Electrician at times very annoying. As I have stated in my last two reports that breaks in this long line may some time prove disastrous. I still feel that it should be divided into four or more circuits. And would recommend the purchase of a six circuit Repeater as soon as we have a place to put one. The addition of several more Pull Boxes would be a great advantage and will probably be put in next year, the location of same I do not think it necessary to mention at this time, but will take pleasure in so doing, whenever requested. There are now in line, one Automatic steam whistle attachment, four bell strikers, five large gongs, seven tappers and thirty pull boxes.

There have been added this year, one bell striker and five pull boxes.

Location of pull or signal boxes are as follows.

23. Cor. Hancock streets and Cottage Ave.
25. Cor. Newcomb and Sea Streets.
26. Unitarian Church.
28. Cor. Greenleaf and Hancock Streets.
34. Cor. Main and Union Streets.
35. Cor. School and Hancock Streets.

- 37. Cor. Franklin and Water Streets.
- 38. Cor. Liberty and Plain Streets.
- 39. Cor. Penn and Liberty Streets.
- 41. Cor. School and Granite Streets.
- 42. Jones' Corner.
- 43. Cor. Copeland and Common Streets.
- 46. Hose House, No. 3.
- 45. Cor. Willard and Crescent Streets.
- 47. Cor. Bates Avenue and Grove Street.
- 49. Cor. Willard and Robertson Streets.
- 51. Linden Street, Tubular Rivet Co., Factory.
- 52. Cor. Farrington and Brook Streets.
- 53. Cor. Warren and Winthrop Avenues.
- 54. Cor. Hancock and Fenno Streets.
- 56. Wollaston Hotel.
- 58. Cor. Adams and Beal Streets.
- 61. Cor. Hancock and Squantum Streets.
- 62. Cor. Hancock and Atlantic Streets.
- 64. Cor. Newbury and Billings Streets.
- 68. Squantum.
- 71. Cor. Mill and Washington Streets.
- 72. Cor. South and Washington Streets.
- 73. Cor. Winter and Howard Streets.
- 75. Cor. Sumner and Main Streets.
- 135. Weymouth.
- 137. Braintree.
- 158. Milton.

2 Blows, recall, "all out."

2-2 3 times, one session in school.

1 blow for test, at 7 A.M. 12 M. 1 P.M. 5 P.M.

10 blows followed by box number denotes second alarm.

12 blows and box number denotes general alarm.

TELEPHONE.

The Central Fire Station and the residence of the Chief Engineer are connected by telephone. The service has averaged better this year than in the year previous.

It was with regret that I learned of the resignation of the manager Miss Fernald, as she was always very obliging in

transmitting messages. The present management so far has also been very satisfactory as well as obliging. I don't think I can find any particular fault for whenever there has been a break, cross or burn out on my circuit it has been attended to as soon as I could possibly expect the same to be done. It is my opinion that the service could be made much better and it is hoped by your Engineer that the New England Telephone Company will remedy the trouble in Quincy as far as possible.

HORSES.

The horses of the Department are seven in number and with the exception of one are as good as can be found in any Department. There is also a horse stationed in Ward 4 belonging to the Highway Department that answers to all calls that Hose 3 respond to. This horse which has proved satisfactory was purchased this year and has been wholly supported by the Highway Department. This does not seem fair to have the Commissioner of Public Works furnish horses for the Fire Department, and I will recommend that this horse be transferred to the Fire Department. The driver to be made permanent, the team and driver to work on highways the same as it does at present, within one-half or three quarters of a mile from said hose house, the actual time worked to be charged to Highway Department, or if the Commissioner would rather have control of said team only in case of fire or some other want of the Chief Engineer. He (the Commissioner) charge actual time of team and one driver to Fire Department, as this team has been a source of annoyance to both Commissioner of Public Works and the Chief Engineer, it is hoped that this matter will be settled in some way, while the net cost of running this team will make no difference in the amount to the City, yet I believe that it should be charged to the right place. There are so many things that are wanted and are also really necessary to make a first-class and efficient Fire Department, that it is hardly reasonable to suppose that all these wants can be complied with next year, yet I do expect that something can be done each year until we are second to none in this state. I ask you as well as the Citizens to interest yourselves in the importance of having a good and efficient Fire Department. The efforts of the Engi-

neer I ask you to encourage, and as kind words cost nothing I ask them for the men who have so bravely and successfully battled with fire and smoke, the past three years. Remember they have every thing to fight, not only the fire and smoke, the wet and cold, but the criticisms of the opposite side-walk and a great many times (and very unjustly) the local Press. I say to you again do all you can to assist them ever remembering that a kind word costs you nothing. Pay them well that the best may be obtained. In closing this report I wish to thank the Committee on Fire Department in proportion to the courtesy shown me and for what they have done for the Fire Department.

Bass, Chairman, ward 1.	} Members of Fire Department Committee.
Drake, ward 2	
Little, ward 4	
Roberts, ward 5	
Rinn, ward 6	

To the assistant Engineers I am under many obligations for their faithful assistance.

The Foremen, Officers and Members of the Department for their successful efforts, have my profound thanks.

To the Police Officers for their valuable assistance, and the willingness they have shown on every occasion in performing such duties as was required of them. I will improve this opportunity of extending to them my thanks for the same.

And to His Honor the Mayor, Henry O. Fairbanks, for the interest you have taken in the welfare of this Department. Also for the honorable treatment I have always received at your hands I wish to express my heartfelt gratitude.

Very respectfully submitted,

WALTER H. RIPLEY,

Chief Engineer, Q.F.D.

REPORT OF THE BOARD OF MANAGERS OF Public Burial Places.

TO HIS HONOR THE MAYOR OF THE CITY OF QUINCY:—

The managers of Public Burial Places respectfully submit their third annual report:—

MOUNT WOLLASTON CEMETERY.

The number of lots sold during the year is thirty-four, for which the sum of \$850 was received.

The amount for labor on lots, as returned by the superintendent is \$1,543, of which sum \$1,198.25 has been collected, leaving \$344.75 due and unpaid.

Five additional lots have been added to the number under perpetual care, and the sum added to the "Repair Fund," is \$750. The total amount of said "Fund" is \$5,825.

In accordance with the recommendation in our last report the tract of land of about three acres lying north of the cemetery has been purchased of the Woodward Fund, for the sum of \$6,000, with the understanding that a certain part of the money received each year for lots, shall not be used for the improvement of the cemetery, but shall be applied towards reducing said amount of first cost of the land. For this purpose and also to realize some income for improvements, it must be evident that the lots in this new part must be sold at a considerable increase from the present low price of lots, and that the Board of Managers shall have authority to place such price on the lots as may be considered advisable, being governed by the above named stipulation, and by choice of location and other circumstances. It should be the intention of the incoming Board to have a proper survey and laying out of the land into

streets and paths and lots for interments, with a plan of the same, as soon as can be done, and for this purpose your Board ask for an appropriation of \$500, which, with the usual appropriation of \$1,100, for care and improvement of this cemetery, and care of the Hancock Street Cemetery, will make a total appropriation of \$1,600, which is respectfully requested.

FINANCIAL.

The amount of the appropriation by the Council, and the income from various sources is as follows:—

Appropriation	\$1,100 00
Collected for lots sold	850 00
“ “ single graves sold	25 00
“ “ non-resident assessments	50 00
“ “ labor on lots, 1888	10 00
“ “ “ “ “ 1889	46 00
“ “ “ “ “ 1890	486 00
“ “ “ “ “ 1891	1,198 25
Income of Repair Fund	228 37
							<hr/>
							\$3,993 62

Respectfully submitted,

JOHN HALL, *Chairman.*

GEORGE L. GILL, *Secretary.*

REPORT OF TRUSTEES OF

Thomas Crane Public Library.

The Trustees of the Thomas Crane Public Library submit herewith their annual report, being the twenty-first of the whole series since the library was opened.

The number of books purchased during the past year was 645. The number of books given to the library was 88. There have been 626 volumes re-bound, and 267 volumes worn out have been replaced by new copies. There have been added 108 pamphlets to those already in the possession of the library. The number of names on the librarian's register is 10,379, and of this number 580 were added during the year. During the year 1891 the library was opened to the public 304 days.

The division of reading matter in use by the borrowers from the library during 1891 is set forth in the following table:—

	PUBLIC.	SCHOOLS.	TOTAL.	PER CENT.
Fiction	23,128	441	23,569	35.1
Periodicals	16,086	341	16,427	24.4
Juvenile Fiction	13,023	1,041	14,064	20.9
History	2,322	695	3,017	4.4
Arts and Sciences	1,996	209	2,205	3.2
General Literature	1,964	152	2,116	3.1
Travels	1,795	436	2,231	3.3

Biography	1,630	208	1,838	2.7
Poetry	1,058	16	1,074	1.6
Religion	349	4	353	.5
Educational	229		229	.3
	<hr/> 63,580	<hr/> 3,543	<hr/> 67,123	

In their report for the year 1890 the Trustees referred to the encouraging results which had followed the efforts to increase the circulation of books among the scholars in the schools of the city. With a view of further developing this circulation, which they regard as upon the whole the most important work the Library is now doing, the Trustees caused during the last year a classified list of books for young people to be prepared and published in the form of a book of 80 pages in October last, the cost of printing which was defrayed from the accumulation of the catalogue fund. Copies have been offered for sale at the price of ten cents each, and up to the close of the year, 95 copies had been sold. This sum covers only the cost of the material and a small portion of the press-work. Other copies have been placed in the hands of the teachers of the several schools, so that they can be accessible to all scholars. The list in question was prepared by Miss A. G. White, and it affords the trustees gratification to express their sense of the excellent judgment, as well as the professional skill and fidelity with which the work was executed. The result reflects credit on the library.

In the report submitted by the Trustees for the year closing December 31, 1890, a comparative statement was submitted of the circulation of the library for 1890 as compared with that for 1880, showing the increase during ten years and the changes in the character of the books circulated. As compared with the previous year, that ending December 31st, 1890, the year just closed presents no change calling for comment. The total number of volumes circulated increased 1566, or about 2.5 per cent, almost wholly in that portion of the circulation which goes out from the library proper. There was a slight falling off in fiction (775 volumes) and a considerable increase in periodicals (2299); but as a whole the statistics of distribution change but little, and they seem to indicate that

the work the library is now doing is fixed in its character and would only change to an appreciable extent under the influence of some very active trustee or superintendent of schools who felt an interest in stimulating certain classes of reading or study. Under such an outside impulse as might thus be communicated the trustees have little doubt the circulation of books could at any time be largely increased. In the absence of such an impulse it will probably continue for some time about what it now is.

The trustees submit the following statement showing the cost of maintaining the library during the past year:—

CHARLES F. ADAMS.
F. A. CLAFLIN.
EMERY L. CRANE.
WILLIAM H. PRICE.
H. A. KEITH.

Report of the Managers

—OF—

ADAMS ACADEMY.

The Board of Managers of Adams Academy having received from the Master his annual report, submit the following:—

The school now numbers fifty boys, eight of whom are in the boarding house, five come daily by train, and thirty-seven are from our own city. The work of the past year though interrupted somewhat by a family affliction withdrawing for a time a veteran teacher, and the necessity found for changing another teacher, has been in a good degree successful.

Of the second class, six made brilliant records, at the preliminary examinations for college. Others who only just passed or were conditioned would in the judgment of the Master have succeeded better, but for the above named interruption of the working staff of the School. Of the first class six were admitted to Harvard College without condition. The two remaining members after working in vacation entered, one the Scientific School, and the other the department of Special Students lately reorganized.

The Master also reports an improvement in matters of finance, a larger sum from the endowment fund, and more than usually satisfactory payment by the parents of boys from whom tuition fees are received. And yet only a small part of what

is required to put the School in good working order is in hand. Desks and other furniture in the Academy building need renewal. The Boarding House — serious as is the problem it presents — till it can furnish better quarters and in some better locality cannot expect to secure its old prosperity; and yet to let it go and have the School become only a day school would be a misfortune.

The present play-ground too is likely soon to be required for other purposes, and a substitute should have early consideration.

In view of these needs and the added fact that probably not all from whom tuition fees might be expected will pay, the master says: “ It seems to me that some wealthy citizens who are not likely to avail themselves in the future of the privileges of the Academy for their own sons could hardly do a kindlier act, at moderate expense, than to undertake to defray the school charge every year for some one good boy of limited means, whose abilities are amply sufficient to warrant his staying in the school but who is yet likely to be crowded out in the competition.” He also says, “ Another way in which some citizen would greatly benefit the school at no very serious expense, would be by establishing a fund for prizes. A gift of a thousand dollars properly invested would give an annual income nearly if not quite sufficient to pay the cost of such prizes as are now given, and operate as a great stimulus and source of pleasure both in competition and receipt to the boys.”

These conditions of the School and suggestions concerning it, as presented by the Master, we press upon the consideration of the city and of the public.

REPORT
OF THE
PUBLIC SCHOOLS
OF THE
CITY OF QUINCY
FOR 1891.

BOSTON:
BROWN BROS. & CO.,
1892.

Report School Committee.

TO THE CITIZENS OF QUINCY :

Again the School Board make report of the work consummated in the year passed.

The pathway is well-worn and your Board only reaffirmed that the schools are excellent, that the spirit of progress is keenly alive and the results still carry Quincy into the foreground as a model in educational affairs, attracting the attention and exciting the admiration of observers and students in this kind of work.

We rejoice with our fellow-citizens in the fact that the Willard School is established in the new building, that the arrangements are perfected and the children of the district are comfortably housed, and under the guidance of competent instructors are receiving the grand benefits that through the public schools of Quincy are the just portion of all its children.

Again the Board feel bound to urge upon the citizens the pressing need in Ward Three of increased facilities for the proper conduct of school work, and wish to emphasize the statement, that every month's delay greatly adds to the burdens to be borne by those who are striving with existing conditions.

The school charges constitute a very heavy draft upon the city's resources, and will prove an ever increasing sum. When it is remembered that the census of 1880 showed 1,948 children of school age, and that the census of 1891 showed 4045, it can readily be seen that the annual outlay is now necessarily much larger and when it is considered that new branches of school work, requiring expert and special teachers, are steadily being added to the line of studies, it will be seen that the per capita expense will be increased.

Through the eminent skill and perseverance of the superintendent combined with the natural desire of the outsider to come within the Quincy district of schools and thereby gain the prestige that is afforded by an experience here, we have been able to obtain a much higher order of talent in our teaching force, than otherwise would have been secured, still it is not denied that a more liberal expenditure would probably have yielded a better result.

It is manifest that with the improvements of all kinds, in buildings, courses of study, attention to details etc., it will be necessary to revise at an early date the salary list, and give to faithful and efficient servants a larger compensation.

In regard to our High School, the Board feel greatly gratified to be able to record so excellent a year's work as that just passed.

The number of pupils attending has been larger than formerly and the standard of scholarship has been unusually high.

In losing our present superintendent, Mr. Aldrich, at the close of the year, we feel the difficulty imposed on this Board in the attempt to find another whose earnest work and cheerful and courteous bearing shall place him before his fellow-citizens as in all ways the peer of him we have lost.

We express the hope that in continuing his life-work in another field he shall still receive as he will surely merit, the approbation of every well-wisher of the Public Schools.

Report of Superintendent.

TO THE SCHOOL COMMITTEE OF QUINCY :—

I set about the preparation of my annual report, which constitutes the seventeenth of the series submitted by the superintendent of schools, after the termination of my official connection with the Quincy schools, and while much absorbed by the untried duties of a new position. I am also cut off from ready means of consultation of teachers, and from data which should be at hand for the preparation of an exhaustive report of the workings of the schools during the past year. These circumstances make it imperatively necessary that my report for the year 1891 be a brief one. I hope that its brevity may be attributed to these causes, and not to a sudden extinction of interest in the welfare of a body of pupils and teachers with whom my relations have been of long standing and the most pleasant nature.

It is with genuine regret that I am obliged to acknowledge the practical impossibility of discussing at length many matters in which I have felt so long continued and deep an interest that I cannot, with entire composure, contemplate the fact that I shall have no other opportunity of addressing you in regard to them. Perhaps, however, I should remember that the length of a report is not a certain measure of its usefulness. I may, possibly, in the compass of a few pages, accomplish as much good as I should do by writing at greater length.

The following tables will afford much comprehensive information in regard to the school affairs of the city, and to them I

append a few remarks which seem pertinent at the present time.

I. POPULATION.

Population of Quincy by United States census of 1890, 16,711.

Number of children between five and fifteen years of age, according to the enumeration made on the first day of May :

	1886.	1887.	1888.	1889.	1890.	1891.
Adams	727	769	840	926	1,024	1,158
Coddington	461	461	480	481	485	522
Washington	376	380	368	353	325	337
Willard	939	964	1,008	1,108	1,161	1,281
Wollaston	242	251	278	313	332	365
Quincy	343	328	322	314	338	382
	<hr/> 3,088	<hr/> 3,153	<hr/> 3,296	<hr/> 3,495	<hr/> 3,665	<hr/> 4,045

I have not at hand the means of making comparisons with other cities, but if the above figures be contrasted with similar returns from the city of Newton, general attention may be drawn to a point which I have repeatedly emphasized in former reports viz., the very large number of children in Quincy between five and fifteen years of age as compared with the entire population of the city.

According to the census of 1890, the population of Newton was 24,375, of which number Quincy's population, 16,711, is 68 per cent. The number of children in Newton in May 1, 1891 is reported as 4,436, of which number Quincy's return of 4,045 constituted *91 per cent.*

The report of the Newton School Committee speaks of a gain of 195 in the school population as "a notable increase." A comparison of the Quincy school population of '91 with that of '90 discloses an increase of 380, almost twice that of Newton. It would seem that consideration of such facts as these ought eventually to lead people to cease wondering at the steadily increasing cost of maintaining our schools.

II. FINANCIAL.

Valuation of city, May 1, 1891 . . . \$14,427,030 00

Rate of taxation . . . 13 60

For the ordinary school expenses of 1891, the City Council made the following appropriations:—

For salaries	\$45,725 00
“ fuel	2,700 00
“ janitors	3,500 00
“ transportation of pupils	1,300 00
“ incidentals	5,000 00
“ books and stationery	2,500 00
“ evening drawing school	1,000 00
“ evening common schools *	1,200 00
“ repairs	2,000 00

\$64,925 00

* Of this amount \$125 was transferred by vote of the Council to the appropriation for fuel, and \$50 to the appropriation for evening drawing school.

EXPENDITURES IN 1891.

For salaries	\$45,695 87
Unexpended balance, \$29.13.	
For fuel	2,822 76
Unexpended balance, \$2.24.	
For pay of janitors	3,466 49
Unexpended balance, \$33.51.	
For transportation	1,271 15
Unexpended balance, \$28.85.	
For incidentals	4,995 52
Unexpended balance, \$4.48.	
For books and stationery	2,498 65
Unexpended balance, \$1.35.	
For evening drawing school	1,042 64
Unexpended balance, \$7.36.	
For evening common schools	1,024 84
Unexpended balance, \$0.16.	
For repairs of school houses	\$2,020 59
Expended by Commissioner of Public Works.	

Total expenditure for ordinary school purposes, \$64,838 51

During 1891 the city of Newton expended for the ordinary expenses of her schools, exclusive of repairs, the sum of \$124,-861.31. It is to be remembered that Newton's valuation is very greatly in excess of the valuation of Quincy, as a result of which the actual burden of taxation for support of schools does not vary greatly in the two cities. It is, nevertheless, rather a striking fact that for a school population ninety-one per cent. as large as that of Newton, Quincy spends only *fifty-two per cent.* as much money.

EXPENSES OF 1890.

As explained in my last report, the appropriation granted in 1890 did not prove large enough for the expenses of the year. Claims to the amount of \$3,351.40, outstanding at the close of 1890, were provided for by special action of the council at the opening of the present year. A detailed statement of these claims appears on subsequent pages.

III. SCHOOL BUILDINGS.

High School of 3 rooms,	Date of erection	. . .	1852
Adams School of 10 rooms,	" "	. . .	1855
Coddington School of 9 rooms,	" "	. . .	1855
John Hancock " " 8 "	" "	. . .	1886
Quincy School of 8 rooms,	" "	. . .	1873
Washington School of 8 rooms,	" "	. . .	1858
Willard School of 16 rooms	" "	. . .	1891
Wollaston School of 9 rooms	" "	. . .	1873

The old Willard Schoolhouse was burned on Sunday, Feb. 17, 1889. A prediction made at the time that more than two and one-half years would elapse before a new building would be ready for occupancy would have excited general derision. Such, however, proved to be the fact, the new building not being ready for occupancy until Sept. 9, 1891. In this connection I would call attention to the subject of school house repairs. Under the town form of government such repairs were under the control of the School Board, and no change occurred during the first two years of our present form of

government. At the opening of the year 1891 it was decided that the money appropriated for the repair of school buildings should be expended by the Commissioners of Public Works. As you are aware the language of the charter is not explicit in this matter, good judges differing as to its proper interpretation. Being now wholly free from any personal interest in the matter, my motives will not be open to criticism, if I recommend the Board to endeavor to bring about a return to the earlier practice. In my judgment the matter is of sufficient importance to warrant a slight amendment of the charter, in case an amendment should be deemed necessary. During the past year the Commissioner and the Superintendent of Schools have acted in entire harmony, but the arrangement seems to me an essentially vicious one, under which much needless friction and irritation are quite likely to arise.

IV. TEACHERS.

	MEN.	WOMEN.
High School Principal	1	—
“ “ Assistants	—	3
Grammar School Principals	5	1
Primary “ “	—	1
Assistants in charge of grammar classes	—	23
Assistants in charge of primary classes	—	40
	<hr/>	<hr/>
	6	68
Director of Drawing	—	1
“ “ Music	—	1
“ “ Nature Study	—	1

A comparison of the above table with that of last year discloses an increase of one in the High School assistants and an increase of two in the assistants in charge of grammar classes. With reference to our teachers, two points, repeatedly discussed in previous reports, ought to be persistently kept before the public mind. *These teachers are underpaid.* My impression is that an inspection of our school reports issued prior to eighteen seventy-five, will show that succeeding school committees have long been conscious of this. It ought to be regarded as a

noteworthy fact that during the years which have since elapsed — years in which the schools have earned a remarkable reputation — the work on which this reputation securely rests has been done by *cheap* teachers. Lest I be misunderstood, let me say rather, that this work has been done by excellent teachers who have been inadequately paid. This ought not to go on. It is remarkable that such underpayment of teachers has not proved wholly disastrous. It is perhaps fortunate for our peace of mind that we cannot measure the loss which the schools have sustained through the constant sifting out of good teachers who have gone elsewhere because they could not afford to remain in Quincy.

These teachers are overworked. Not that this is true in every instance; but it is a general truth. The number of pupils has increased with great rapidity, and the increase in school accommodations and in the number of teachers has steadily lagged behind. I will not dwell on the injustice done teachers, but again it may be fortunate for our peace of mind that we cannot accurately estimate the loss which pupils have experienced from these causes. If I may again refer to a city with which I have made several comparisons, let me point out the fact that with a school population 91 per cent. as large as that of Newton, we employ a teaching force but 69 per cent. as large as hers. Such facts as these should be forced upon public attention until a better state of things exists.

V. ATTENDANCE.

Whole number of pupils registered,	3,649,	an increase of	227
Average “ “ “ belonging,	2,865,	“ “ “	167
“ “ “ “ attending,	2,733,	“ “ “	146
Ratio of attendance to membership	.	.	.95
<i>Pro rata</i> of tardiness to average attendance	.	.	.59

We ought to feel somewhat proud of the attendance record made by our schools during the past fifteen years. The policy by which it has been secured seems to me so wise and effective that I briefly call attention to it. If our experience has proven anything, it is that children love to attend school when schools are what they ought to be. This is the general rule and the fact that here and there an exception is found only proves its soundness.

The broad statement is that a good school is distinguished by the prompt, constant, and willing attendance of its pupils. We have steadily acted upon this belief and have not been disappointed. While the great mass of pupils are so reached it may be asked, what of the exceptions already noted? It is evident that the superintendent cannot have direct, immediate knowledge of every case of absence. No more can the principal of a building. The teacher of any single class, however, *can* have such knowledge. She interests herself at once and thoroughly in every case of absence, dealing directly with the individual concerned, and, if necessary with his parents. If her unaided efforts are not successful the assistance of the principal of the school is promptly invoked. In the rare instances which do not yield to their combined efforts, the help of the superintendent has been called in. Only when the united efforts of all three have failed to produce the desired results have we resorted to the truant officer and the trial justice. These have been regarded as a last resort, only to be employed in desperate cases. As a result of it all, we have had the great majority of children steadily at school because they preferred to be there, and a very small minority at school because they were conscious of being looked after so vigilantly as to make the idea of being irregular in attendance a hopeless one. The point in which we should take special pride is that substantially all this work has been done by the teachers, as the meagre expenditures for services of truant officers bear abundant witness. This service on the part of teachers, far out-reaching the letter of their obligations, is but an illustration of the spirit which has characterized all their work.

EVENING SCHOOLS.

Following the same plan as in preceding years, I speak first of the season of 1890-91, and then, in order to afford more recent information of so much of the present season as belongs to the year 1891.

EVENING DRAWING SCHOOL.

On pages twenty-two and twenty-three of last year's report is a brief account of the opening weeks of the term of 1890-91. From that report I quote as follows:

“ During the present season but one instructor has been employed in the school, Mr. England, having charge of both free hand and mechanical classes. The school was opened on Nov. 4, and for the purposes of this report I make use of the records up to Tuesday, Dec. 23. The applicants for admission were so numerous that it was found necessary to organize the students desiring instruction in mechanical drawing, into two sections, each attending two nights per week, and so leaving two nights for the free hand class. So long as the school was thus arranged in three sections, Class A in mechanical drawing received ten nights’ instruction, with an average attendance of 15.8; class B, twelve nights’ instruction, with an attendance of 21; and the free hand class, ten nights’ instruction, with an attendance of 28.2.

After Dec. 13, the attendance diminished to such an extent that it became necessary to combine classes A and B. Between the time of such consolidation and Dec. 23, the mechanical class were in attendance upon four nights, with an average attendance of 14, and the free hand class, for the same number of evenings, had an attendance of 21.5.”

After the usual Christmas recess, the work of the school was resumed and carried on until April 17. In this second half of the season, the mechanical class received instruction upon 46 nights and the records show an average attendance of 14.6. The free hand class were in attendance on 44 evenings, the average number present being 11.4.

The work of the present season began on Monday, Nov. 2, and continued up to Dec. 12, when the school was closed for a recess somewhat longer than has been customary, but necessarily so as the appropriation was entirely expended. During the six weeks intervening between the dates just named, eleven nights’ instruction was given to the free hand class, the average attendance being 23; and the same number of lessons to each of the mechanical classes, the average attendance being respectively 25 and 22.

EVENING COMMON SCHOOLS.

During the season of 1890—1891 schools of this character were in operation only in the Adams building. The term extended from Oct. 27 of the former year to Feb. 27 of the

latter year and was divided by the usual recess at the holidays.

For the first portion of the term, last year's report gives the number of sessions as twenty-three and the average attendance as one hundred fourteen. The second portion of the term comprised twenty-four nights of instruction offered to an average attendance of forty-six pupils.

For the present season schools were opened in the Adams building on Monday, Oct. 19, '91. Between that date and Wednesday, Dec. 23, twenty-seven sessions were held and the average attendance of pupils was ninety-seven.

NATURE STUDY.

At a recent meeting of the Association of Colleges in New England, the following changes in courses of study were recommended.

1. The introduction of elementary natural history into the earlier years of the programme as a substantial subject to be taught by demonstration and practical exercises rather than from books.

2. The introduction of elementary physics into the later years of the programme as a substantial subject, to be taught by the experimental or laboratory method, and to include exact weighing and measuring by the pupils themselves.

3. The introduction of elementary algebra at an age not less than 12 years.

4. The introduction of elementary plane geometry at an age not later than 13 years.

5. The offering of opportunity to study French, German or Latin, or any two of these languages, from and after the age of 10 years.

I shall have occasion at this time to refer only to the first of the changes proposed. The others I have printed because they now form the subject of very active discussions in all educational circles. The tendency to regard the *present* in school subjects, methods, and management as the *final* is so strong that it is well for us to be informed that such discussions are going on.

It is doubtful if a more conservative class exists in any community than may be found in the teachers of such community. When to this class conservatism is joined, the prevailing popular conservatism in all educational matters, we have in existence a most formidable barrier to all educational progress. I do not forget the innumerable demands made upon schools and teachers, many of which ought to meet with only a stern denial. I am aware that many new theories have only their novelty to recommend them. At the same time, however, we must admit that with advancing age of both individual and community comes an increasing reluctance for change of any sort. With increasing years, both offer a less hospitable reception to new ideas. And so it comes to pass that most individuals in adult life view with more or less misgiving any departures in the education of children from the practices which prevailed in their own early life. To their minds, the same knowledge which was formerly regarded as of paramount importance must still be secured at whatever sacrifice. Not to pursue this line of thought, I may suggest a view which is certainly more reasonable. It cannot be that while marvelous changes are taking place in all other departments of human activity, educational values and practices are alone to remain fixed.

While new ideas of government, of religion, of the treatment of criminals, the insane, and other unfortunates are making their way with startling rapidity; while methods of conducting business, and of carrying on all industrial pursuits are being revolutionized; while, in short, a new civilization is all about us, it must be that educational practice will conform itself to these changed conditions. It will do this whether we wish it or not, and practically it is for each community to determine how patiently it will listen to the measures of reform or innovation which are urged upon it, how impartially it will estimate the wisdom of these measures, and how vigorously it will insist upon the adoption of such measures as demonstrate their soundness.

Let us now recur to the innovations recommended by the association of colleges. Herbert Spencer points out three phases through which human opinion passes—"the unanimity of the ignorant, the disagreement of the inquiring and the unanimity of the wise." I think it is beyond dispute that the

first change recommended—"the introduction of elementary natural history into the earlier years of the programme" has reached Spenser's third phase. While it has reached this stage as matter of doctrine, almost everything is yet to be accomplished in practice. A few courses of study include the work now under discussion, but generally nothing satisfactory can be found in the schools which are supposed to follow the courses. In the great majority of instances, neither in course of study nor practice of the school is any trace of such work to be found.

These considerations lead me to look back with satisfaction upon the share I had in the introduction to the Quincy schools of that systematic teaching and training which we have commonly termed Nature study. When I recollect, however, that the work was begun in September 1890, and has thus far been pursued but one and a half school years, I fully realize that only a beginning has been made. The beginning, however, has been a successful one, and if the project shall, in the future, receive cordial support and wise management, it is certain to produce results of great value. It is with much regret that I find myself obliged to sever my personal connection with an experiment from which so much may be hoped.

LEWIS T. WADE.

In April 1886, systematic instruction in music was added to the branches formerly pursued in the schools. The committee in charge of the matter realized that, as a first condition of success, the right person must be found to take charge of the enterprise. It was their good fortune to be directed to Mr. Wade, then in charge of musical instruction in the town of Wellesley. They visited the schools of that place, and were satisfied that no further search was necessary. Mr. Wade entered at once upon his new work in Quincy, and for five years rendered our schools a service of the highest possible character. During the latter portion of this time he was, indeed, enfeebled by the encroachments of a disease which finally proved fatal. This only served, however, to bring out in brighter re-

lief heroic qualities of the most exalted kind. While I cannot now pay to the memory of Mr. Wade the tribute which it so fully deserves, I have felt that this report should contain some mention — however hasty and imperfect — of one who served the children of Quincy so faithfully, and whose personal qualities were an inspiration to all who came in contact with him.

On account of their intrinsic value, and as a memorial of their author, I reprint these brief reports which he prepared in regard to his work as musical director:

“A musical education, so far as regards vocal music, should produce the following results: First, the ability to read music as easily and correctly as printed language. Second, the growth and improvement of the voice through a proper use of the respiratory organs and the organs of speech. Third, the appreciation of the *soul* of music, or a knowledge of the art of expression, both as regards music and words. Fourth, a certain mental and moral character, gained largely through the *quality* of the music sung. Thus far, in Quincy, the work of the teachers has been principally directed to accomplishing the first of these results, with such attention to the voice as the character and ability of the pupil would permit. The system of instruction followed is that originated by H. E. Holt of Boston, the music studied being that comprised in the books and charts of the ‘Normal Music Course.’

“As little or no instruction in music had been given in any grade, it was considered best to confine the study for the first two months (May and June, 1886,) to the *pitch* of sounds alone. At the beginning of the present school-year, in September, the study of *time* was begun and since that time the greater part of the grammar schools have sung the studies for one and two voices contained in the first and second series of charts; and at the present writing (Feb. 1) many of them have nearly finished the studies and songs contained in the first section of the Second Reader. At the close of the present school year, most of the grammar schools will have sung the music contained in the second section of the Second Reader, and will have the ability to read music of ordinary difficulty written in three parts. The various primary schools are at different stages of the work above described. In the High School, the music studied is written in three parts,— for bass, soprano and

alto; and, as elsewhere, thus far, has been of such a character as to give the ability to read music at sight. In all the grades the endeavor is to give individual ability, and to secure independent thought and action. *Imitation* is not tolerated in any department of the study.

“ I cannot speak too highly of the intelligence and enthusiasm with which the teachers have prosecuted this work. With such co-operation, success is assured.”

“ In the School Report of 1886-87, I stated briefly the results which might reasonably be expected from a course of instruction in vocal music in the public schools.

“ It has occurred to me that it may not be out of place at this time to outline, to some extent, the processes by which we propose to accomplish these results in the schools of Quincy, and to give some of the peculiar features of the method of instruction which has been adopted.

“ While it may be known that the system of instruction in vocal music originated by H. E. Holt, of Boston, which we are following, embodies to a great extent the latest and most progressive methods of teaching, and is, in many respects, a ‘ new departure ’ in this field, its peculiarities will be better understood if contrasted somewhat with former methods, as relating to public school work in music.

“ It certainly cannot be claimed that the old methods of instruction have produced the best results attainable in the majority of schools where they have been followed. Perhaps the most fertile cause of their failure will be found in the fact that, until quite recently, it has been assumed by musicians that all instruction in the art of reading music at sight must be confined to the more advanced grades of school, the common impression being that little children have no ability in this direction. The results of this belief may be seen in the sets of charts and text-books designed for the primary grades, where little or no provision has been made for *education* in music, they being prepared wholly for the purpose of teaching *rote singing*. It was expected that the teacher should first sing the songs or exercises found in them, the pupil’s part being to *imitate* her singing. It is not too much to say that the time thus expended was worse than wasted, as the subsequent musical in-

struction attempted in the higher grades was hindered by the bad habits thus formed in the primaries.

“Under the new system all this is changed. Recognizing the almost universal ability of children to know and produce musical tones correct in pitch and length, the work of musical instruction begins in the lowest grade of school. Where the old systems assumed that little children could do *nothing* in sight singing, the new system has proved that they can do *everything*.

“By a process of ‘stuffing’ the old system made imitators; by teaching the children to think and act for themselves, the new system makes independent singers.

“The old systems regarded the song or exercise as the *whole*, and required the teacher to teach of these, by imitation, a large ‘vocabulary with which to make plain the notation.’ The new system regards as the whole that from which all songs, from the simplest melody to the grandest choral, are constructed,—the succession of tones we call the scale.

“The success of the new system of musical instruction is perhaps due to this last fact more than to any other. For, if we are to regard the *song* as the whole, and attempt to make plain the mysteries of our musical notation by teaching a large number of these by imitation (afterward using these same songs in connection with their notation, that the children may ‘learn the notes,’) we shall at once see that to secure a pattern worthy of imitation we must have a musician, in each room in the person of the regular teacher, who can not only sing but who can sing tastefully and well. In consequence of this fact the method, even if correct in theory, must fail in practice, as such teachers are rare.

“When, on the other hand, we regard the scale as the whole, no such difficulty is found. The children are taught the scale by imitation when they first enter school. When this is accomplished the teacher has sung all that will ever be required. She may proceed to analyze this scale, to teach all its intervals, and to impart a correct knowledge of rhythmic movement, without finding it necessary to sing at all at any stage of the work, the only requisite being teaching ability and a correct ear.

“Such are, in brief, the essential features of the system of musical instruction in use in the schools of Quincy. That it is of such a character as to make easy and pleasant the work of both teacher and pupil is true, but it is no less true that whatever the course of instruction followed, or however the work may be planned by the special teacher, few results can be obtained without the active co-operation of the regular teachers, who must give the *drill* from day to day, and who are the real *teachers* of music in your schools. It gives me pleasure to testify to their hearty and efficient efforts in this study. Their course from the first has been such as to place me under personal obligations to them and leaves nothing to be desired.”

To the School Committee of Quincy, and to the Parents of the Children in the Public Schools:

“The brief reports on the subject of musical instruction in the schools of Quincy, which for the past two years your superintendent has kindly incorporated in his school report, have been largely devoted to giving an outline of the results to be accomplished in the department of musical study, with some brief mention of the methods by which these results were to be gained.

“Up to the present time this has seemed all that was necessary, but the work in music has now reached a stage of development in all the grades which leads me to feel that there should be a more perfect understanding on your part as to the aims and purposes of the teachers and myself regarding some of the departments of the work, to the end that you may coöperate with us in our endeavors to attain the highest possible standard of excellence.

“The date of this school report marks almost the end of three years of musical instruction in your schools. I trust that it is not now necessary for me to say to you that during these three years the study of music has been something more than a matter of *recreation* for the pupils. You have long before this become aware of the fact that your children are learning to read music as they read language, and that their interest in the study is no more directly maintained by means of the quickening of their *emotions* through the character of the music studied,

than by the appeal to their *intellects* through their constantly increasing consciousness of power to grasp the subject and meaning of *new* musical compositions.

“It may be remembered that in my first report on this subject, I stated that the results which should follow the study of music in the public schools were threefold, viz., the ability to sing music at *sight*, the growth and improvement of the *voice*, and the capability to sing with *expression*.

“Without having gained the first of these results, it is folly to attempt the attainment of the others. Except the two last named shall receive due attention, the ability to sing at sight will cause injury to the singer, and become a source of annoyance to his friends. To insure the greatest degree of symmetry in the musical attainments of the pupils, each day’s instruction must, so to speak, cut off a section from each of these departments of the art of singing, in the order named. While the recognition of this fact has been the basis of the methods of musical instruction which from the beginning have been followed in your schools, and while we shall ever try to maintain proper proportions in the education of the pupils, the fact that, in the grammar grades, at least, the ability to sing at sight now exists in a great degree makes it possible to devote much more time to the cultivation of the voice than has before been advisable.

“It is to this department of the work that I wish to call your especial attention.

“The systematic work in voice cultivation, which has for some time past been made a special feature of the musical instruction, is bearing fruit in a manner which, though natural, is no less worthy of careful attention. I refer to the production and development of *exceptional* voices. There is no building without its quota of such voices; voices which, even in the singing in the primary grades, make themselves felt in a manner which speaks volumes for their future value.

“It seems to me that the possession of a fine voice is in itself, during the period of childhood and youth, an element of danger, which makes it especially necessary to watch the musical activity of children who possess such voices, in order to prevent them from doing themselves physical injury by means of the very instrument with which nature has endowed

them, and which, under proper management, may become the source of health and happiness.

“Many of the children are just awaking to the knowledge of the fact that they possess voices of exceptional ease and sweetness. The *danger* of this knowledge lies in the fact that it leads them to err in two particulars, viz., *they may sing too much or too long*, or, what is worse, *they may sing too loudly*.

“While children are attending school and singing twenty minutes per day, it will not be wise to urge them to do too much singing even in the home. Still less will it be advisable to place them where they will be likely to be required to sing heavy music.

“The injury done to the voice by *too much* singing, however, is not to be compared to that caused by *too loud* singing.

“Nothing so weakens the vocal organs and destroys the quality of tone by robbing it of all its *sweetness*, as the effort to produce large tones. *Children have not large voices; and whenever they make the effort to sing loudly, they do so to the injury of their vocal organs.*

“Let this fact be taken as the basis of the method relating to the management of the children’s voices by all who supervise their singing in the home, church, or Sabbath-school. Let the voices be always used for the production of *sweet* rather than of *strong* tones, and wait for them to *grow* as the child grows; and when your children shall be young men and women, many of them will have voices which will enable them to give correct expression to musical ideas of the highest character.

“In a sense the children of Quincy are *my* children, and it is my interest in them that leads me to urge upon you thus strongly the importance of coöperation with the teachers and myself in our endeavor to develop and train their voices. What this coöperation may be you will readily see, and I feel sure that I have only to mention this matter to secure your aid, inasmuch as such care as you may be able to exercise in preventing loud or long-continued singing may materially advance the musical interest of the children.

“Your confidence in my judgment in so vital a matter, which you have shown in many ways, has been to me a constant incentive to careful and conscientious work, and it will

be my endeavor in the future, as in the past, to do all in my power to follow the methods of instruction which shall systematically cultivate both the mental and physical conditions of the art of singing; methods which not only aim to give the mind musical ideas to express, but which also make the voice capable of giving them effective utterance."

TRAINING CLASS.

In accordance with our usual custom, I print a list of the names of the young ladies who have been in the schools during the year for the purpose of learning to teach:

Margaret F. Allen	Eva E. Herring
Flora M. Barlow	Annie M. Keenan
Annie M. Brown	Annie C. Knight
Annie F. Conroy	Agnes B. Llewellyn
Annie B. Crane	Mary M. McNally
Maude M. Crane	Elizabeth A. Moore
Florence A. Crawford	Annie L. Murphy
Augusta E. Dell	Inez L. Nutting
Ella L. Dickerman	Hattie N. Peterson
Annie D. Dunham	Lena M. Pfaffman
C. Gertrude Everson	Alice M. M. Richards
Mary L. Geddes	Edith B. Roby
Kate W. Grose	Isabel Sage
Kate A. Hart	Frances C. Sullivan
M. Carrie Hart	Edith B. Waldron
E. Fannie Hayward	Alice L. Warren
Helen E. Hazard	Mabel E. Wetherbee
Nellie F. Worthley.	

In previous reports I have remarked that a community is sure to secure as good schools as it demands, and equally certain to have as poor schools as it will tolerate. The fact has been pointed out that the outlook for the schools under a city form of government is not in some respects as favorable as

under the town form. There never was a time when the schools of Quincy stood more in need of judicious friends than at present.

I venture to hope that successive school boards will be found as far in advance of general sentiment as may be possible without sacrificing the confidence of the public; to hope that the community will show confidence enough in its school officials to enable them to effect from time to time such changes in the conduct of the schools as a wisely progressive policy may dictate. It is not a very difficult matter to maintain schools of sufficient excellence to satisfy the general public, but to meet the reasonable expectations of the most enlightened members of such general public is not an easy thing.

I cannot close this report without again giving expression to the sincere regret with which I contemplate the termination of official relations which to me have been extremely pleasant. Whatever of good has been accomplished in the past dozen years has been chiefly the result of the intelligence, zeal, and devotion of our teachers. I trust that such qualities may never fail to meet with generous appreciation at the hands of succeeding school committees. I can bespeak for my successor no more cordial support and co-operation than I have always received at your hands. Such relations in the future as in the past, will prove the surest guarantee of a wise and stable administration of the important interests committed to your charge.

GEORGE I. ALDRICH.

RESIGNATIONS AND TRANSFERS.

High School. Sibylla A. Pfaffmann to Harvard Annex.

Adams School. Caroline Leben to Washington; Jennie G. Carmichael to Boston.

Coddington School. Minnie M. James to Woburn as director of music; Emily R. White, Jessie B. Clarke, Nettie M. McQuesten to Waltham.

John Hancock School. Ellen A. Sills; Eva B. Wallace to Providence.

Quincy School. Nina A. Page; Effie E. Beal to Rockland.

Washington School. Dorcas C. Higgins to Somerville; Alice L. French.

Willard School. A. Louise McCormick to Melrose; Jennie A. Corliss to Boston; Rena M. Chamberlin to Wollaston; Nellie M. Baker.

Wollaston School. Sydney E. Junkins; Lizzie J. Simmons to become director of drawing in Adams; Nellie F. Kendall; Carrie A. Scott; Manetta W. Penney to Boston.

31. Henry A. Chase of Boston and Elvira M. Eaton of Quincy.

Mayor's Address 1891.

GENTLEMEN OF THE COUNCIL:

In accordance with the provisions of our charter, and in pursuance to the call of the citizens, we have assembled here today to take upon ourselves a solemn obligation to perform such duties as will devolve upon us with care and fidelity, with zeal and an earnest purpose, being actuated by one motive, endeavoring to accomplish but one result — the welfare and prosperity of our city.

As we today officially assume the duties, we should endeavor to take a comprehensive view of the work that lies before us, and it becomes my duty to invite your attention in as brief a manner as possible to the municipal affairs of our city, and then go forward with you to meet its duties and responsibilities.

The prosperity of the affairs of any well ordered municipal government depends upon the management of its resources; and how to give the city a high quality of service in all its departments with a moderate tax rate is by all odds the problem that comes home directly to the citizens.

It will become my duty to carefully consider the urgent needs and demands of the various departments for the ensuing year, to thoroughly estimate the running expenses and cost of ordinary improvements, and place before you at an early date an official communication on the subject. I believe that the current expenses of our city should be paid entirely out of its revenue for the year; when, however, an improvement is designed to be of a lasting benefit, the burden should be in part borne in the years to be benefitted, but such improvements

should only be made after careful and mature deliberation and a firm belief in the future benefits to be enjoyed.

Expenditure of the public monies for current expenses and improvements are controlled by the law limiting municipal indebtedness and fixing the rate of taxation. The appropriations for city purposes cannot in any year exceed \$12 on \$1000 of the average valuation of property for the three preceding years, which appears from the assessors' books to be as follows :

Valuation 1888	\$9,757,960 00
" 1889	12,319,245 00
" 1890	13,683,000 00

Total	\$35,760,205 00
-------	---	---	---	---	---	-----------------

Which makes the average valuation to be \$11,853,400.

Upon this amount, less abatements and with receipts from various sources, must be raised the income for the year, to which is added the state and county tax, and the sums required for that portion of the city indebtedness falling due.

The borrowing capacity of the city is limited by law to 2½ per cent. of the above average valuation, which would be about \$296,000.

The debt of the city January 1st, 1891, is as follows :

CITY DEBT JANUARY 1, 1891.

	Totals.	Falling due this year.
Neponset bridge,	\$18,000 00	\$2,000 00
Land for Willard schoolhouse,	14,220 00	1,580 00
Extension of Wollaston schoolhouse,	10,000 00	1,000 00
Willard schoolhouse,	69,300 00	7,700 00
Willard special loan,	4,000 00	1,000 00
Whitwell street,	2,250 00	1,000 00
Engine house, Ward 6,	2,200 00	2,200 00
Land on President's avenue, Ward 3,	2,000 00	2,000 00
Settlement with Mahoney,	2,419 73	2,419 73
Bates avenue brook drain,	2,200 00	2,200 00
West street,	3,000 00	1,000 00
Common street,	12,000 00	1,200 00
<i>Amounts carried forward</i>	<i>\$141,589 73</i>	<i>\$25,299 73</i>

<i>Amounts brought forward</i>	\$141,589 73	\$25,299 73
Belmont street,	500 00	500 00
Surveys Water street,	500 00	500 00
Hancock street,	40,000 00	4,000 00
Water supply, source of	800 00	800 00
Pointing wall on Beale street,	200 00	200 00
Additional extension Wollaston school	1,215 66	1,215 66
Award to Patrick Cain,	170 00	170 00
Additional lights,	500 00	500 00
Reardon street,	500 00	500 00
Repair fund Mt. Wollaston Cemetery	4,775 00	
Rock Island fund,	727 50	
Military aid,	150 00	150 00
	<hr/>	<hr/>
	\$191,627 89	\$33,835 39

A total of \$191,627.89, of which amount \$33,835.39, is due the present year. \$179,318.16 is of the nature of permanent improvements.

A careful study of the financial situation leads me to believe that, provided there is no increase in the valuation for the present year, the tax rate will be \$15.50 per \$1,000.

SCHOOLS.

There is no department of the city's interest that has entrusted to it by our charter more of responsibility and care than is invested in the school committee. They have the management of the education of our children, giving them a sound common school instruction, thereby preparing them to be useful, intelligent citizens, a credit to themselves and to our city, which has ever taken a just pride in promoting this department. The detailed report of this committee will soon be laid before the Council, giving you the account of their stewardship, and which will aid you in determining the necessary appropriation to continue the work for the present year. I am informed that the number of pupils at the present time is 3,405; teachers, 71; increase of pupils over last year, 118.

It is to be deeply regretted that the work on the Willard schoolhouse has progressed so slowly, and that still further de-

lays may follow from the financial embarrassment of the contractors. To my mind important questions have arisen, and steps are being taken to thoroughly acquaint myself with the true state of affairs—and I shall communicate to the Council, I hope at an early date, what steps are necessary to hasten the completion of this much needed building.

The city has at the present time invested in school buildings nearly \$200,000, and in consideration of our present debt, and the calls for needed improvements requiring large expenditures to place our city in a more satisfactory condition, I would ask you to carefully consider if it would not be a wise policy to partially insure them, to guard against a heavy loss in the future from destruction by fire.

STREETS.

The operations of the street department are performed under the public eye, and are therefore open to much criticism, often unfair, by those who do not realize the many needs of our city in this direction and the small amount of money available to keep in passable order over eighty miles of accepted streets. I believe it should be the aim that what is worthy to be done that it be well done, and that particular attention should be given that the full value of the money expended be done in a careful, judicious manner, avoiding all unnecessary expenses. It would seem as if more attention should be given to paving the gutters of many of our streets, that the surface water be given a roadway, thus preventing an annual expenditure upon the same streets caused by the regular washing away of the surface after a heavy rain.

Complaint, often well founded, in more than one instance, that the streets are left in a dangerous condition by the corporations who have been granted franchises by the city, and it is a waste of the public monies to thoroughly repair a street to be soon uprooted for the purpose of laying mains of whatever nature, and more attention should be given to this matter, and I would recommend that the ordinance concerning streets be amended by inserting a section prohibiting the opening of the public streets for the purpose of laying pipes or mains from December 1st to April 1st, except in cases of obvious neces-

sity, and that when the city is about to rebuild or resurface a street due notice be sent to the corporations having the right to lay pipes or mains, informing them of the city's work, the street shall not be again opened for the space of six months.

In view of the probable construction of a sewer through many of the streets in the near future, it would seem unwise to order any large outlays, unless the work could be done in harmony with the other departments, though a careful foresight will be given to remedy the defects which are dangerous to public travel. The demand for opening new streets is, of course, in advance of the city's ability to comply, and I would ask the Council to carefully consider the merits of all petitions, in view of the work needed in streets already accepted by the city, and which deserve attention.

The Councils of the previous years have deemed it best for the future welfare of our city to first thoroughly rebuild the main thoroughfares, and it would be my judgment that the present year should see Water street widened to forty feet from Franklin street to Granite street. It is one of the main thoroughfares of the city, and the business travel will be ever on the increase, and public necessity requires that you give this question your immediate attention. Surveys of the above street are in the possession of the city, showing the plans and details. If the work is ordered, it is hoped that the sewer pipes can be laid at the same time. Washington street from the bridge to South street should be thoroughly rebuilt or repaired the coming year; the city cannot afford to rebuild the entire length of this street the present year, if you in your judgment decide to widen Water street, which is the most important and which will cause a large expenditure of money.

The citizens have a right to expect more attention to be given to rebuilding sidewalks in various parts of this city, and which by constant travel are now in a dangerous condition and unfit for use in rainy weather. They have also the right to expect that more street crossings be placed, that they can pass from one sidewalk to another without so much discomfort in various ways, and I hope to make needed improvements in this direction.

I would repeat the recommendations made to the Council of last year by His Honor Mayor Porter in reference to Ran-

dolph avenue. This street is one rarely used by the citizens of Quincy, and I trust the Council will give careful consideration to the proposition of deeding a tract of 1000 acres which includes Randolph avenue and Forest street to the town of Milton.

The report of the Commissioner of Public Works, which will be presented to the Council, will give you valuable information as to the work performed during the past year.

LIGHTING.

The Council of 1890 deemed it wise to establish a system of incandescent lighting in various wards of the city, believing the same would be more satisfactory, and the result of the change will be watched with interest, for the city should take the very best method of furnishing protection to public travel over our highways. We have at present 88 arc lights, 91 incandescent lights, 68 gas lights, 147 oil lamps.

I believe this city will be better lighted by the new arrangements entered into with the gas company to assume the care and repairs of the gas lights.

The proper method to be employed in lighting our streets is a question that we must carefully consider in the near future. Under the new contracts the expense will be the coming year over \$13,000. Many petitions will be received for additional lights, but they cannot be granted. Light has become a necessity, and there is no true business reason why a city should not have the right of furnishing light as a protection to travel over its highways, as an aid to the police service; also to supply its surplus to private citizens. A city should have the right to benefit its taxpayers by saving their monies. I am aware of the many obstacles apparently in the way, but I think the Council can render the city important service by studying this problem and becoming acquainted with the steps now being taken by other cities and towns to accomplish this object of properly lighting the city.

FIRE DEPARTMENT.

One of the necessary adjuncts to a well regulated municipal government is a well organized fire department, and by being so it assures protection to life and property from the rav-

ages of fire, increases the confidence of the citizens, and indirectly enhances the value of real estate.

The rapid growth of our city the past few years makes the demand more imperative that it should be well equipped, and considering the many drawbacks, I believe we should be congratulated upon the efficiency of the fire department during the past year, and the improvement in the working of the fire alarm service, and while the latter could be still further improved by the purchase of a four-circuit repeater, and the time is close at hand when the city must adopt the same, yet I believe it can safely be deferred until another year. I believe that the efficiency of the department would be greatly increased if portable fire extinguishers be attached to each hose carriage for use at light fires, preventing so much damage from water. The efficiency of this department would be greatly increased if the hose houses were built allowing the city to stable one of its horses in each building for use during the night, and the question must be considered in the near future when hose houses in Wards 2 and 3 are rebuilt. At the present time I would call your attention to the urgent need of a new building for the apparatus massed on School street. A large appropriation would be necessary to make the repairs so essentially necessary to render the present building fit for man or beast to stay in, and I believe that it would be a waste of the city monies to attempt any repairing, but a new, commodious building, with a suitable ward room, is by all means the best economy for the city. The present location is most desirable for the protection of the business and home interests of our city. The hydrant service should be increased, affording more protection to the thickly settled portions, and it adds greatly to the effective work of the department.

The hose house in Ward 2 is badly in need of repairs, and it may be best for the interests of the city to have the same rebuilt during the present year, providing in the same building, also, a suitable ward room for the use of the citizens. I am of the opinion that the expense of same can be paid for from the current revenues of the year, and I will send to the Council further information at my earliest opportunity.

LAW DEPARTMENT.

I believe the true policy of the city should be to prevent suits rather than to defend against them, even successfully, for it should be borne in mind that even if the city obtains a clear verdict, it is attended with considerable expense. I do not wish the to be understood as favoring settlements of cases without merit which are brought against the city, but I believe that it is the duty to take every possible means to ascertain the true facts at the time of any accident, thus assisting the city solicitor in the discharge of his duties. As you, gentlemen, are familiar with your own sections, I would thank you to send to the office a notice of any dangerous defect in the highway that comes to your knowledge, that the same may receive prompt attention; and I would ask the Council to consider the question of amending the ordinance in relation to streets by adding a new section obliging the tenant of an estate abutting on a sidewalk to remove snow and ice from same within a specified time, which will prevent many accidents and suits against the city.

WATER SUPPLY.

The plan adopted by the last City Council in reference to a new water supply has been forwarded to the State Board of Health, and their report on the same will be sent to you as soon as received.

THOMAS CRANE PUBLIC LIBRARY.

This institution, which we regard with so much pride, needs no words of praise. It has its mission to perform, and continues to make its silent influence felt ever for good. Year by year its work increases, and its beneficial influence is far reaching and beyond computation.

The board of trustees is composed of a body of men from among our best citizens, and they are keenly alive to the importance of its interest and its bearing upon the welfare of our city.

ADAMS ACADEMY.

The academy continues to hold its place in the educational

ranks, and through its work the world is benefitted by receiving into its ranks young men who have passed through a careful training in various branches of learning.

POOR DEPARTMENT.

An intelligent community are always desirous of furnishing those who are poverty stricken and friendless with the comforts and necessities of life, and to do all that the law requires to make their life more pleasant, and I can say, from a perusal of the report of this department. that the duties assigned have been carefully performed, and the wants of the needy and deserving poor have been judiciously and faithfully attended to at a moderate expense to the city.

POLICE DEPARTMENT.

It is evident that a larger appropriation will be necessary for the support of this department during the present year, but I defer from any recommendation at the present time, but will send to the Council at an early date my views on this important question.

PUBLIC BURIAL PLACES.

The managers of the public burial places will bring to your attention the need of purchasing more land to be devoted to cemetery purposes.

LICENSE QUESTION.

The citizens have again spoken in the most emphatic manner on the question, "Shall licenses for the sale of liquor be granted?" and the significance of their wishes shall not pass unheeded, and every method will be employed to carry their decision into execution, thus maintaining the benefits apparent on every hand by the abolishment of the saloon from our city.

HOSPITAL.

It is the duty of every city to aid and encourage by its financial resources the noble work now being rendered by such

an institution as the City Hospital of Quincy. The value of its work has been well proven during the past year, and the taxpayers will cheerfully sanction an appropriation in furthering the aims of this charitable organization, and I shall willingly recommend an appropriation in the budget.

CITY HALL.

It must be apparent to all who have occasion to have dealings with the city that the City Hall is ill adapted to the needs of its various officials. The city is obliged to pay for the use of other office room at the present time, and suitable apartments must be provided for the board of sewer commissioners in the near future. I firmly believe that it would be the better policy that all the departments should have their headquarters under one roof, and that it will be a wise economy to remodel the lower story with this end in view, of furnishing suitable accommodations, and providing for better sanitary arrangements, for those who are working for the varied interests of the city; also providing fire-proof vaults for the safe keeping of the valuable records, the loss of which would be irreparable.

GARBAGE.

It is the duty of the city to take every measure possible to improve the health and comfort of its citizens, and the collection of the garbage should be continued during the present year, but I believe it to be wise to establish rules and regulations in regard to the collections, thus preventing the disposal of the same to private persons, who disfigure the streets and sidewalks by the careless method employed by boys in carrying the same away; and by the city collecting the whole, revenue from its sale will be largely increased.

BROOKS.

A question which must soon receive careful and deliberate attention from the Council is that of deepening, straightening and widening the water courses of the city.

A careful survey has been made of Town and Furnace brooks, and I hope the members of the Council will make them-

selves familiar with it and thereby realize the difficulties of solving the problem of the better course to pursue.

Before the season arrives when any work can be done I hope to send to the Council a further report with recommendations.

SEWERS.

The Council of 1890 instructed His Honor, the Mayor, to petition the General Court for the necessary legislation to construct a system of sewers, and at the proper time I shall take the pleasure, with the aid of the Council, in appearing before the committee of the Legislature in support of this much-needed public improvement.

If the petition be granted, I believe that a board of commissioners, selected for their experience and successful business training, will be able to improve the minor details, remedy some defects, and furnish the city a satisfactory system of sewerage.

SHADE TREES.

Believing that the streets of our city can be vastly improved by the systematic planting of shade trees thereon, and deeming it wise to look forward to the future for results, I shall recommend a small appropriation for this purpose for the present year, trusting that if the same is done in after years, that the improved appearance of our highways will be one magnet in inviting new residents to our city.

CONTINGENT FUND.

Believing that the citizens have the right to demand that all questions referred to the Council should receive careful consideration from its members, and, when possible, personal investigation be made, that the subject matter be thoroughly understood, I shall recommend a moderate appropriation for the use of the Council, believing that the taxpayers do not desire that those who so willingly give their services to the city should perform these labors thus devolving upon them at their private expense.

I shall trust that the good judgement of the Council will see the wisdom of establishing a rule to govern the expenditures of this appropriation.

WOODWARD FUND.

This fund has been increased during the past year by large sales of land, and now amounts to nearly \$261,000, and the time is close at hand when the city will have the pleasure of having another educational institution in its midst.

CENTENNIAL ANNIVERSARY.

In February, 1892, occurs the centennial anniversary of the incorporation of the town of Quincy, and I would recommend that some notice be taken of the event.

If this meets with your approval, I would suggest that to a special committee of the Council be added citizens of each ward to assist in perfecting all arrangements.

As the financial year of our city does not end until December 31st of each year, an incoming Mayor is deprived of the valuable information which should be contained in the reports of the several departments, and which would enable the citizens to be informed at the beginning of another year as regards the work that has been performed. A careful study of these reports will be necessary before arriving at a correct judgment of many important questions. These reports will be submitted to you gentlemen in good time.

The city of Quincy cannot stand still. With her natural advantages, her granite industries, schools, public library, religious and other educational institutions, her growth should be rapid. Progress should be her motto; but progress does not mean extravagance, and correct conclusions in regard to those improvements which will conduce to her prosperity, and which I have called your attention to, can only be solved by a careful study of each question as it presents itself, and weighing it in its bearings upon all other questions.

I sincerely trust that the year will be one of prosperity and growth to our city; that the business entrusted to our care will receive the attention it deserves. The administration will

be more wisely judged at the end than at the beginning, for the citizens have a right to expect results rather than promises, and "may the Supreme Power, whose aid we invoke today, inspire us to administer the government wisely, with purity of purpose, and our acts rebound to the honor and glory and good name of the city of Quincy."
